Grid
WRONG QUESTION
texbox?

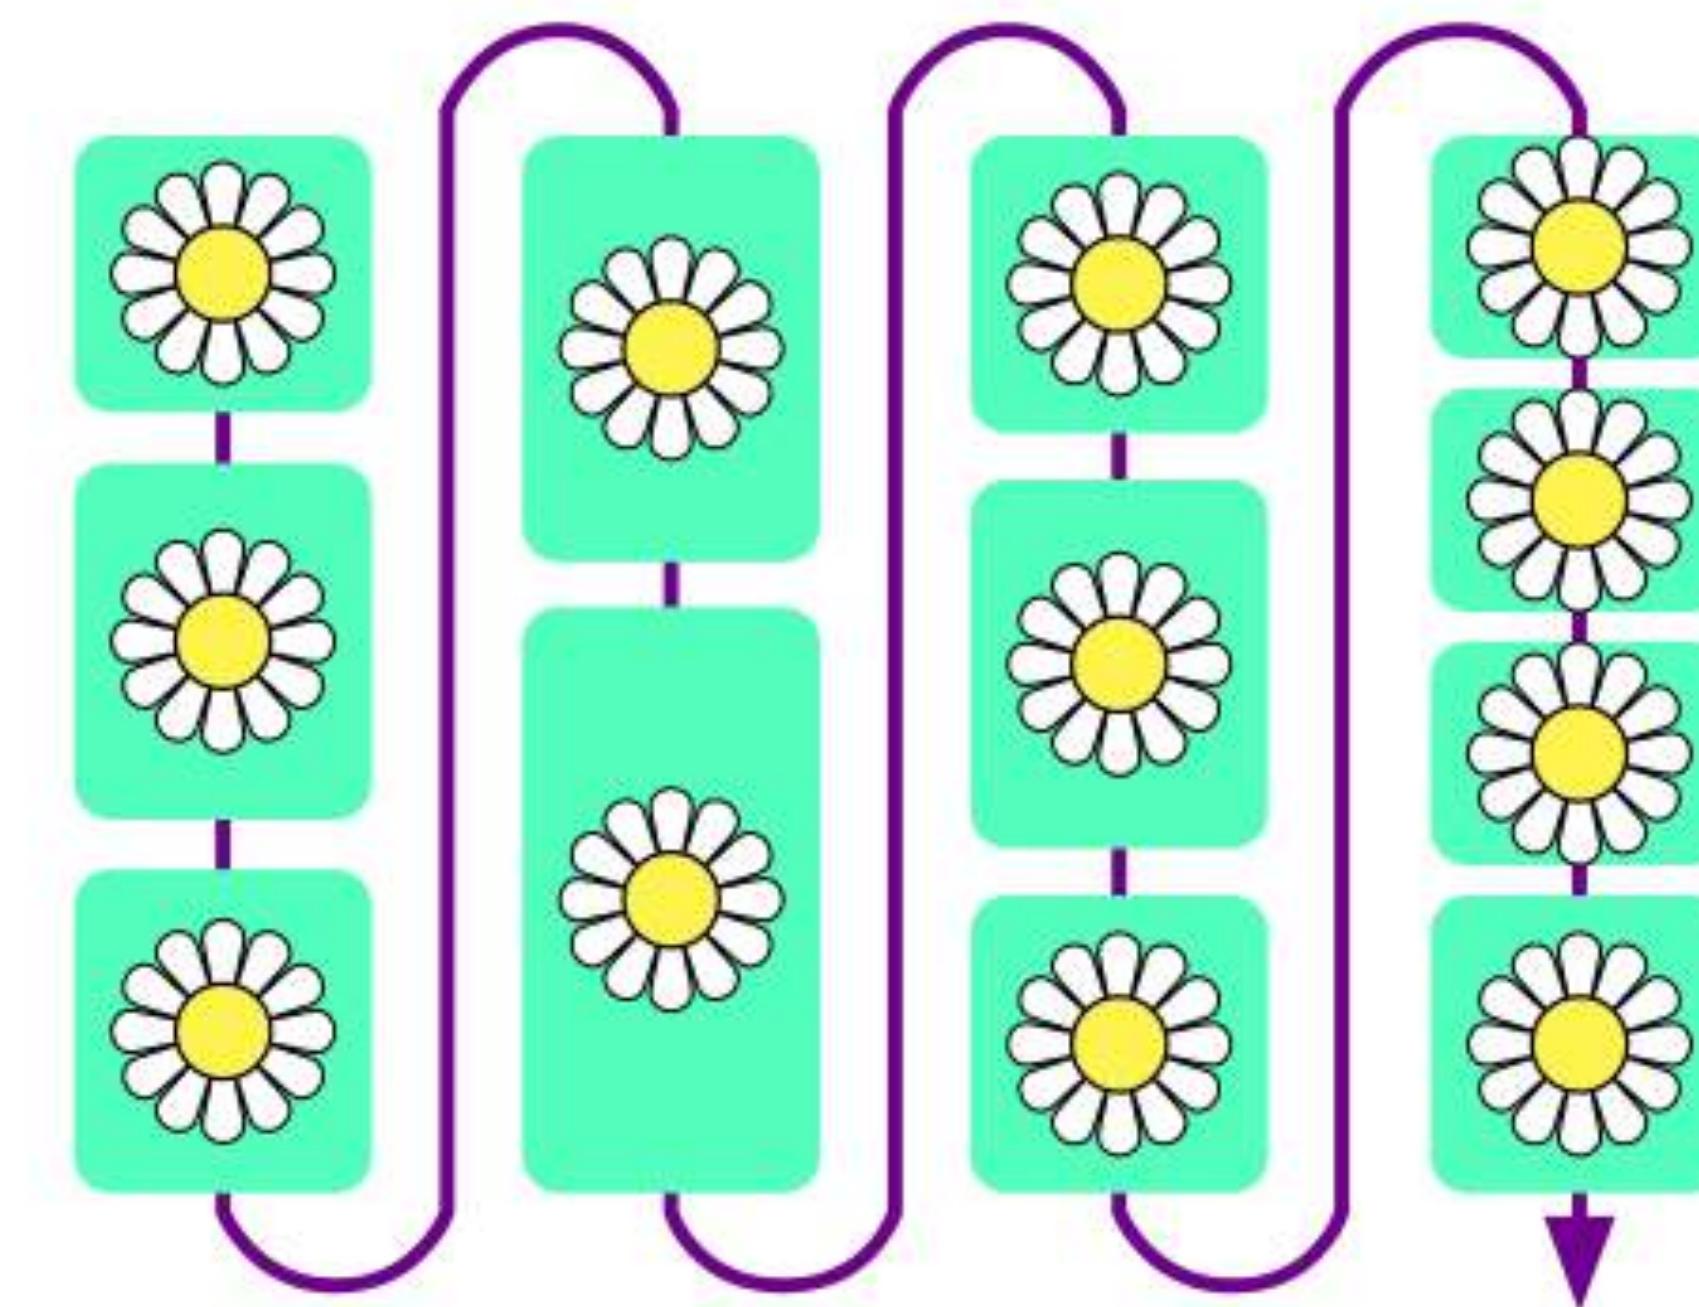

Grid AND Flexbox

Flexbox → single dimension

flex-direction: row

flex-direction: column

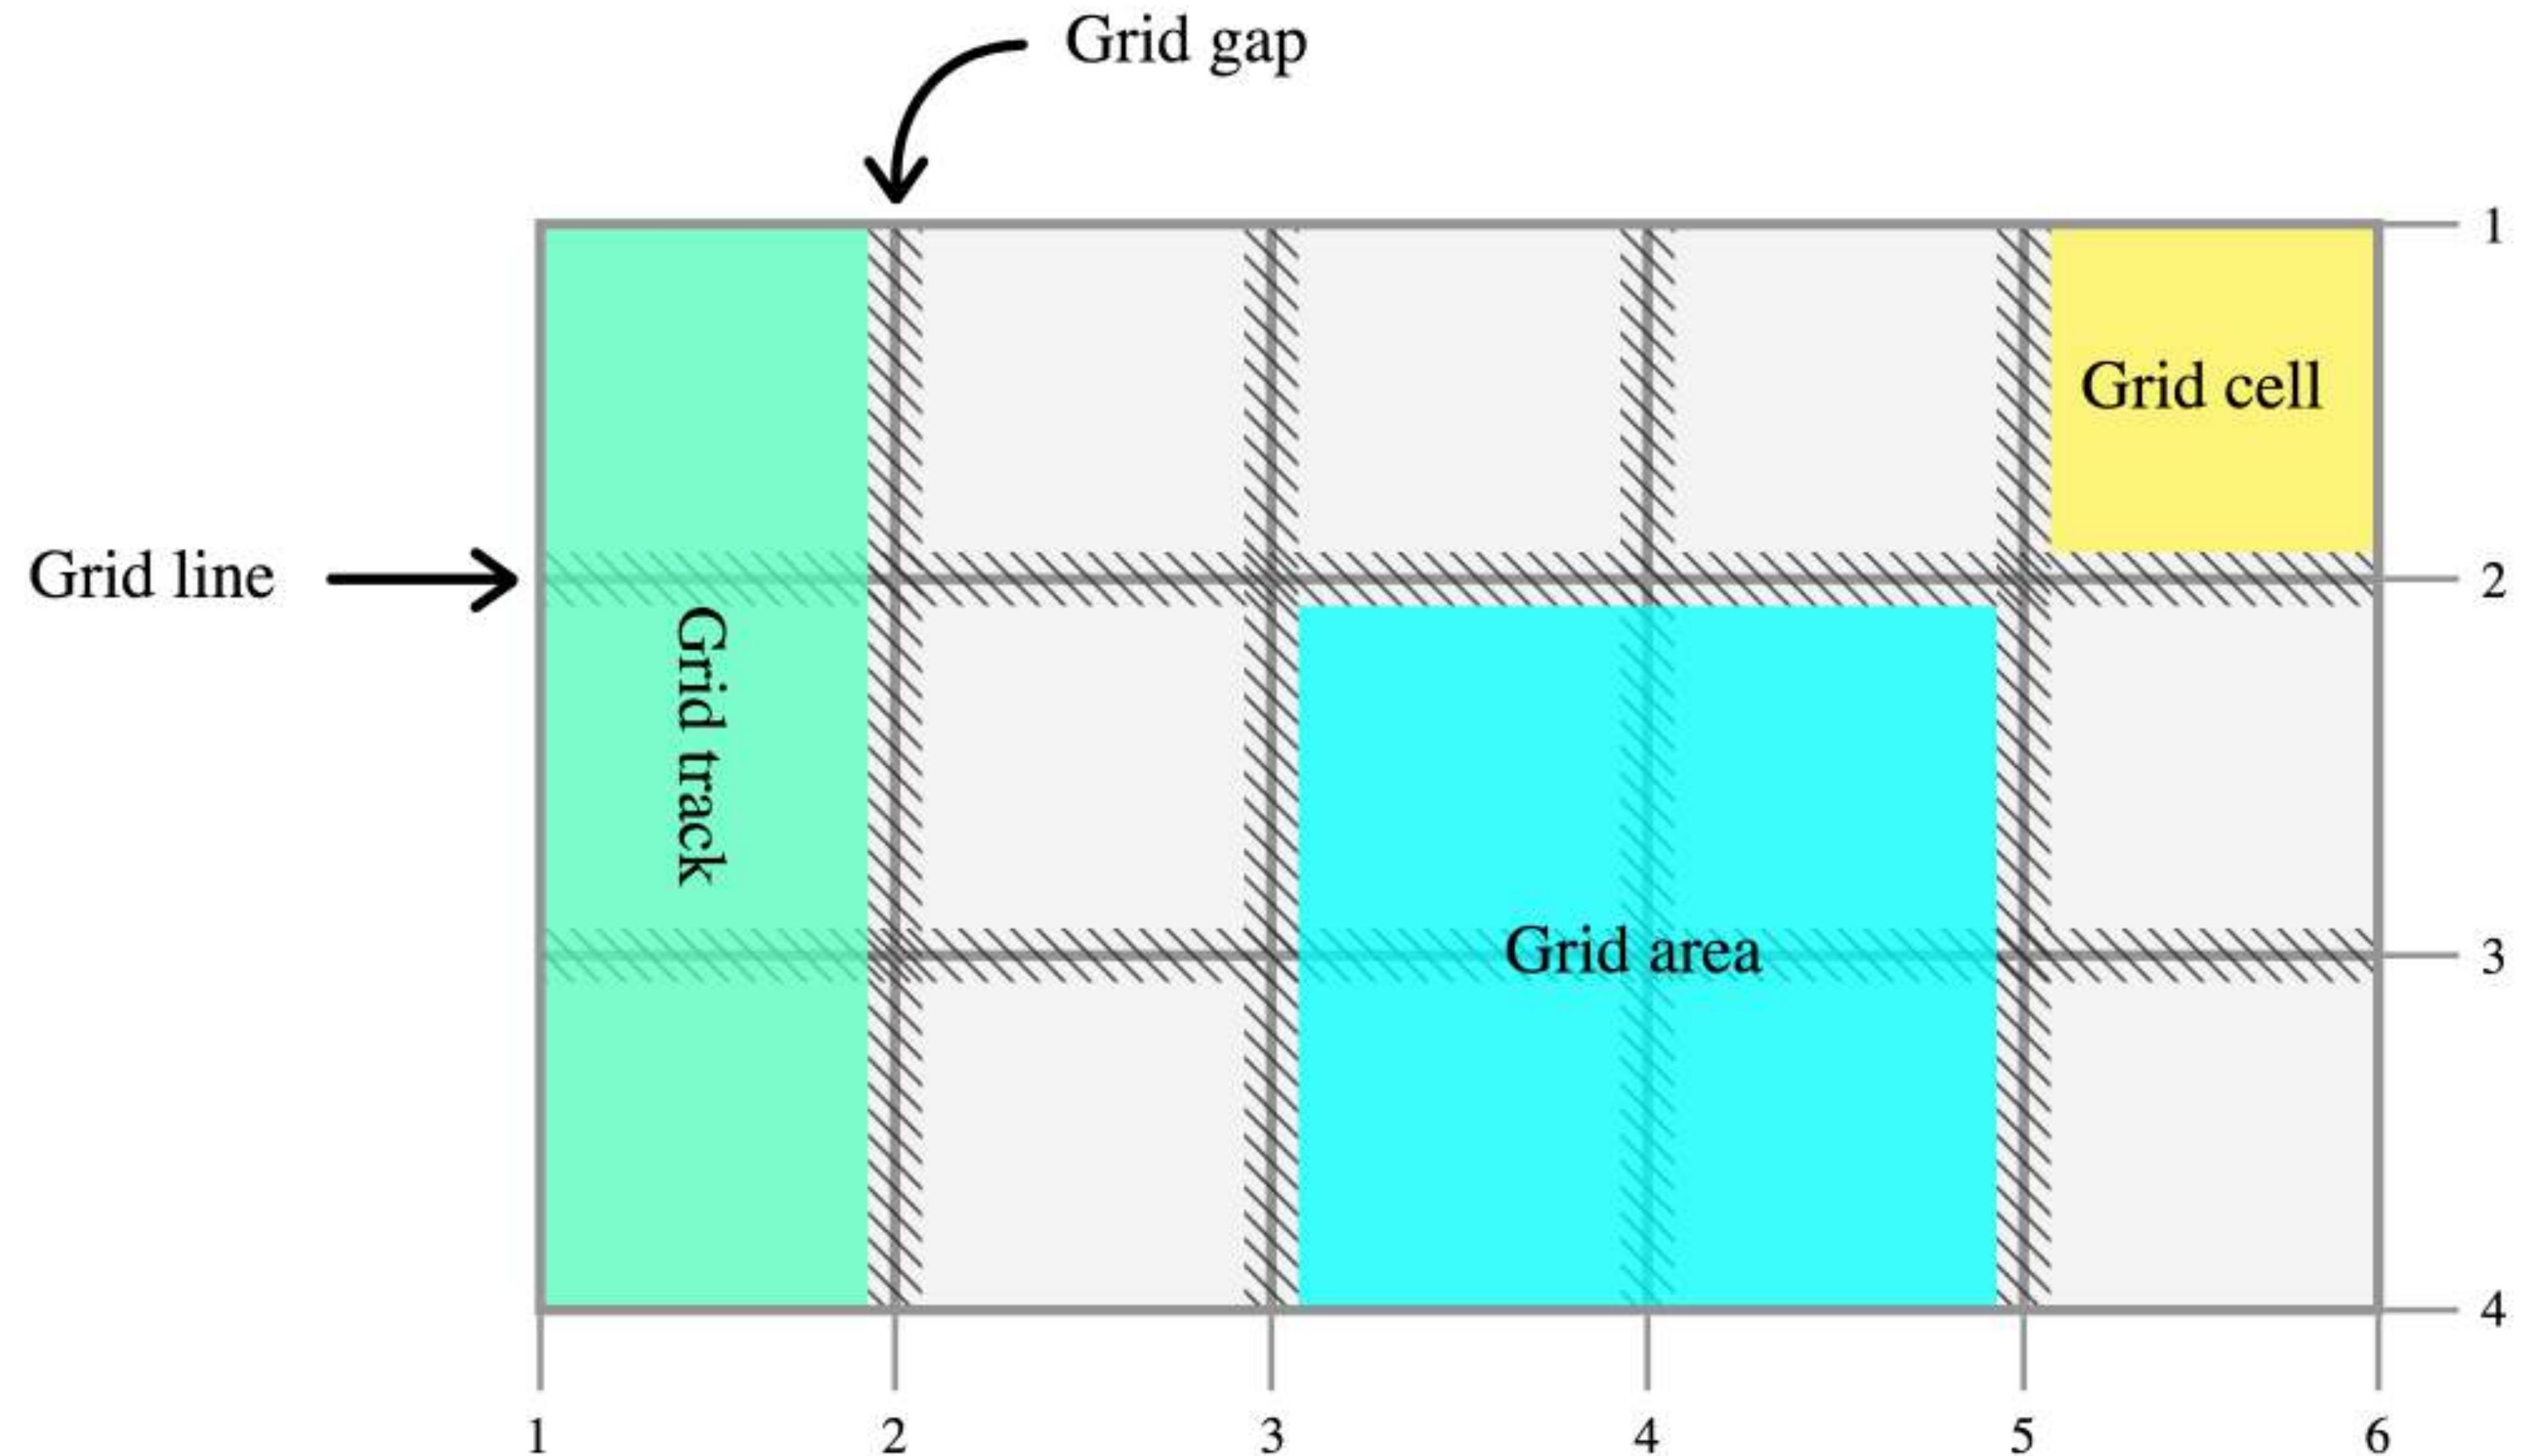

What is CSS grid?

Defines a **two-dimensional** grid-based layout system, optimized for user interface design.

Basic terminology

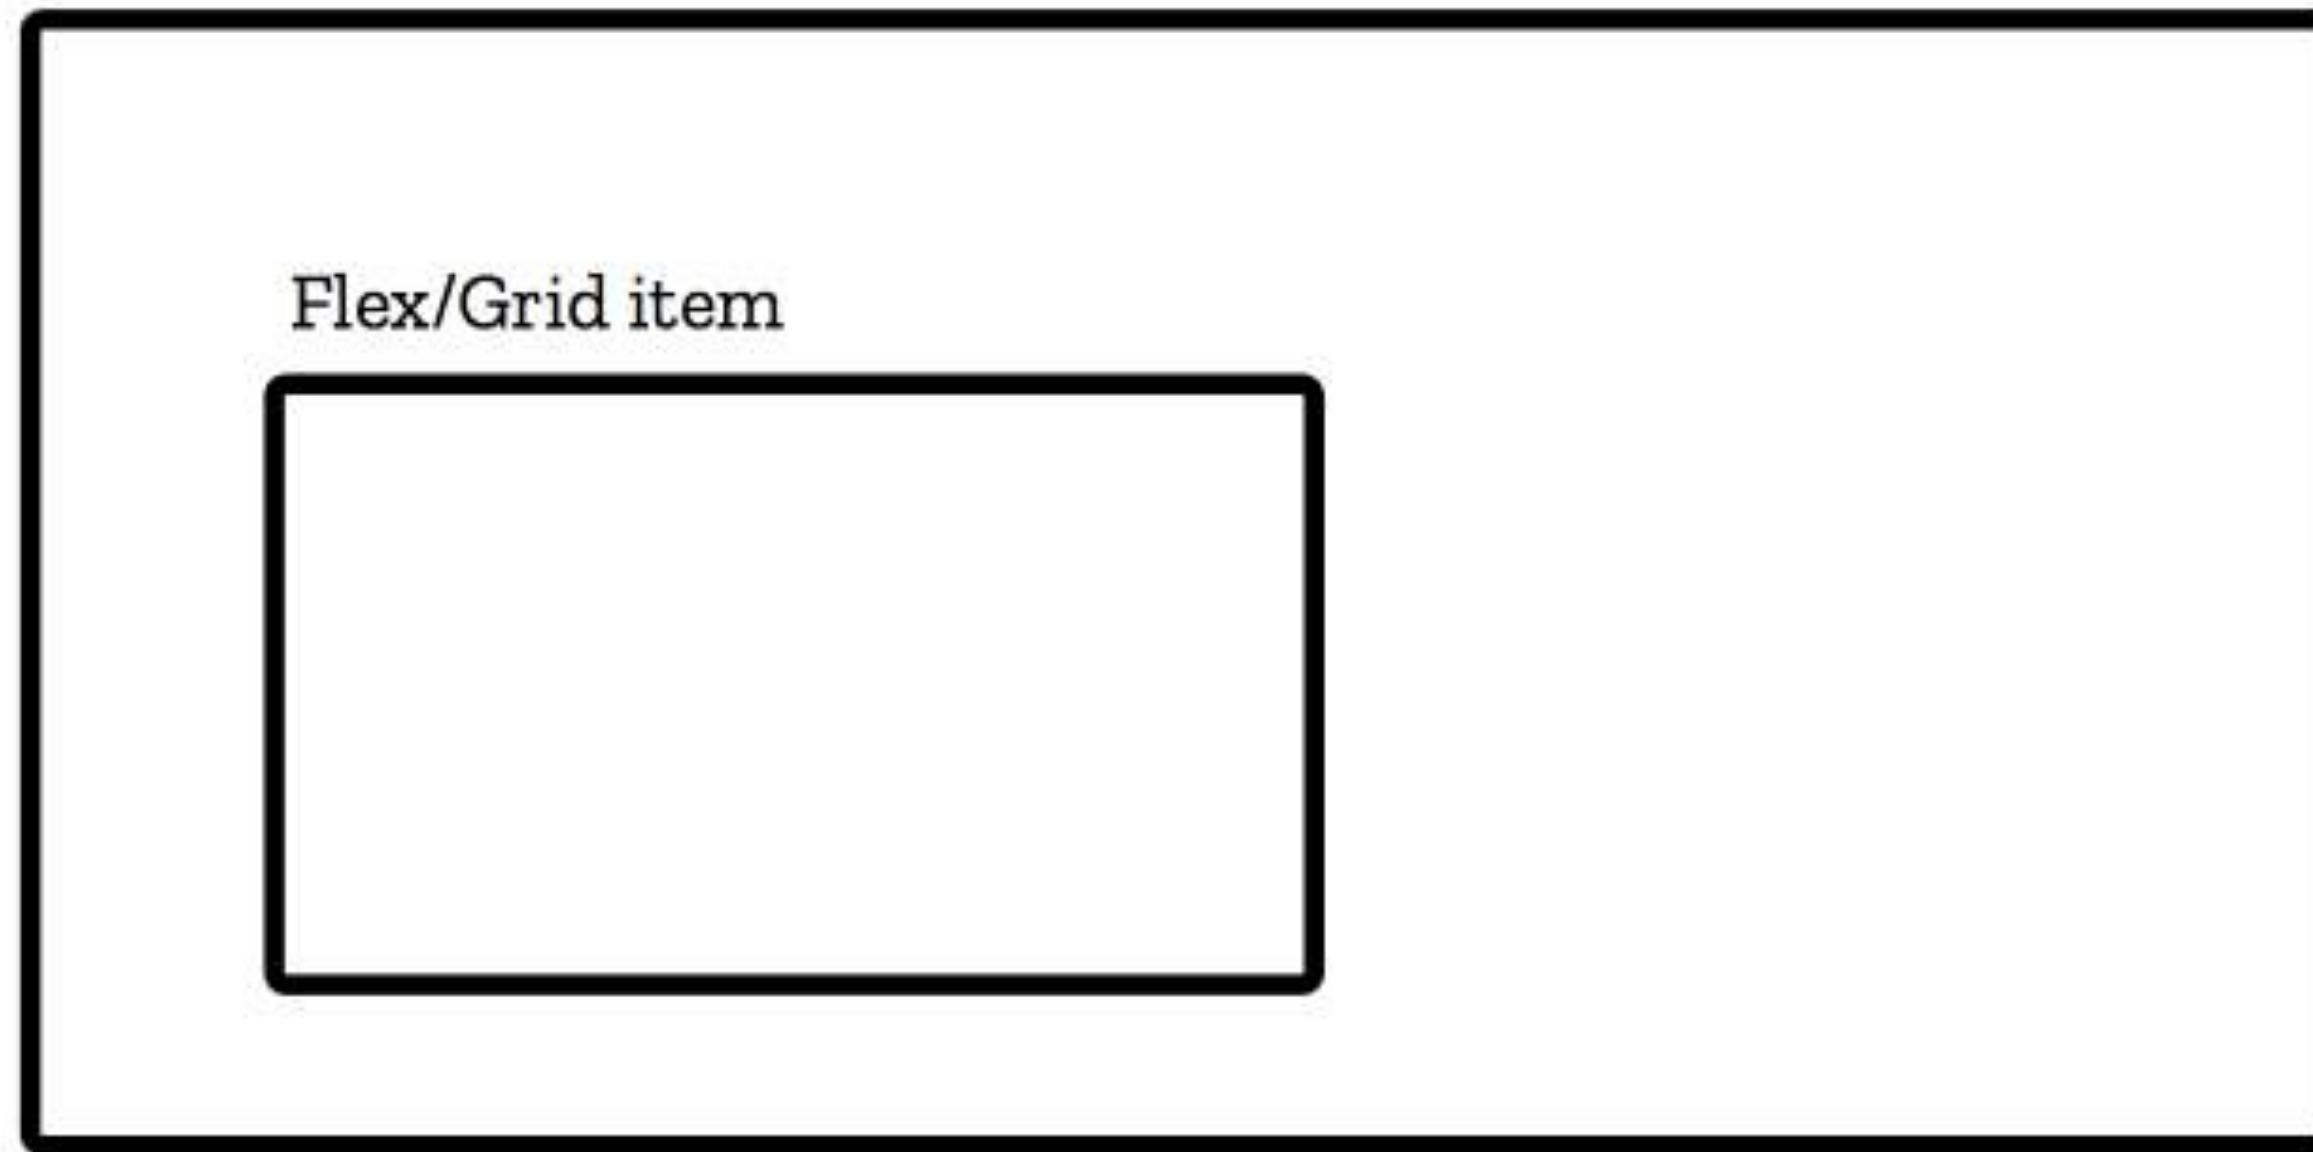

Flexbox and Grid

Based on the container-child relationship

Flex/Grid container

Flex/Grid item

“Grid works from the **container** in, other layout methods start with the **item**”

—Rachel Andrew

Layout technique: inline-block

Item A	Item B	Item C
Item D	Item E	Item F

```
.inlineblock_item {  
    display: inline-block;  
    width: calc(100% / 3);  
}
```

Layout technique: float

Item A	Item B	Item C
Item D	Item E	Item F

```
.float_item {  
    float: left;  
    width: calc(100% / 3);  
}
```

Layout technique: flex

Item A	Item B	Item C
Item D	Item E	Item F

```
.flexbox {  
  display: flex;  
  flex-wrap: wrap;  
}  
  
.flexbox_item {  
  flex: 1 1 calc(100% / 3);  
}
```

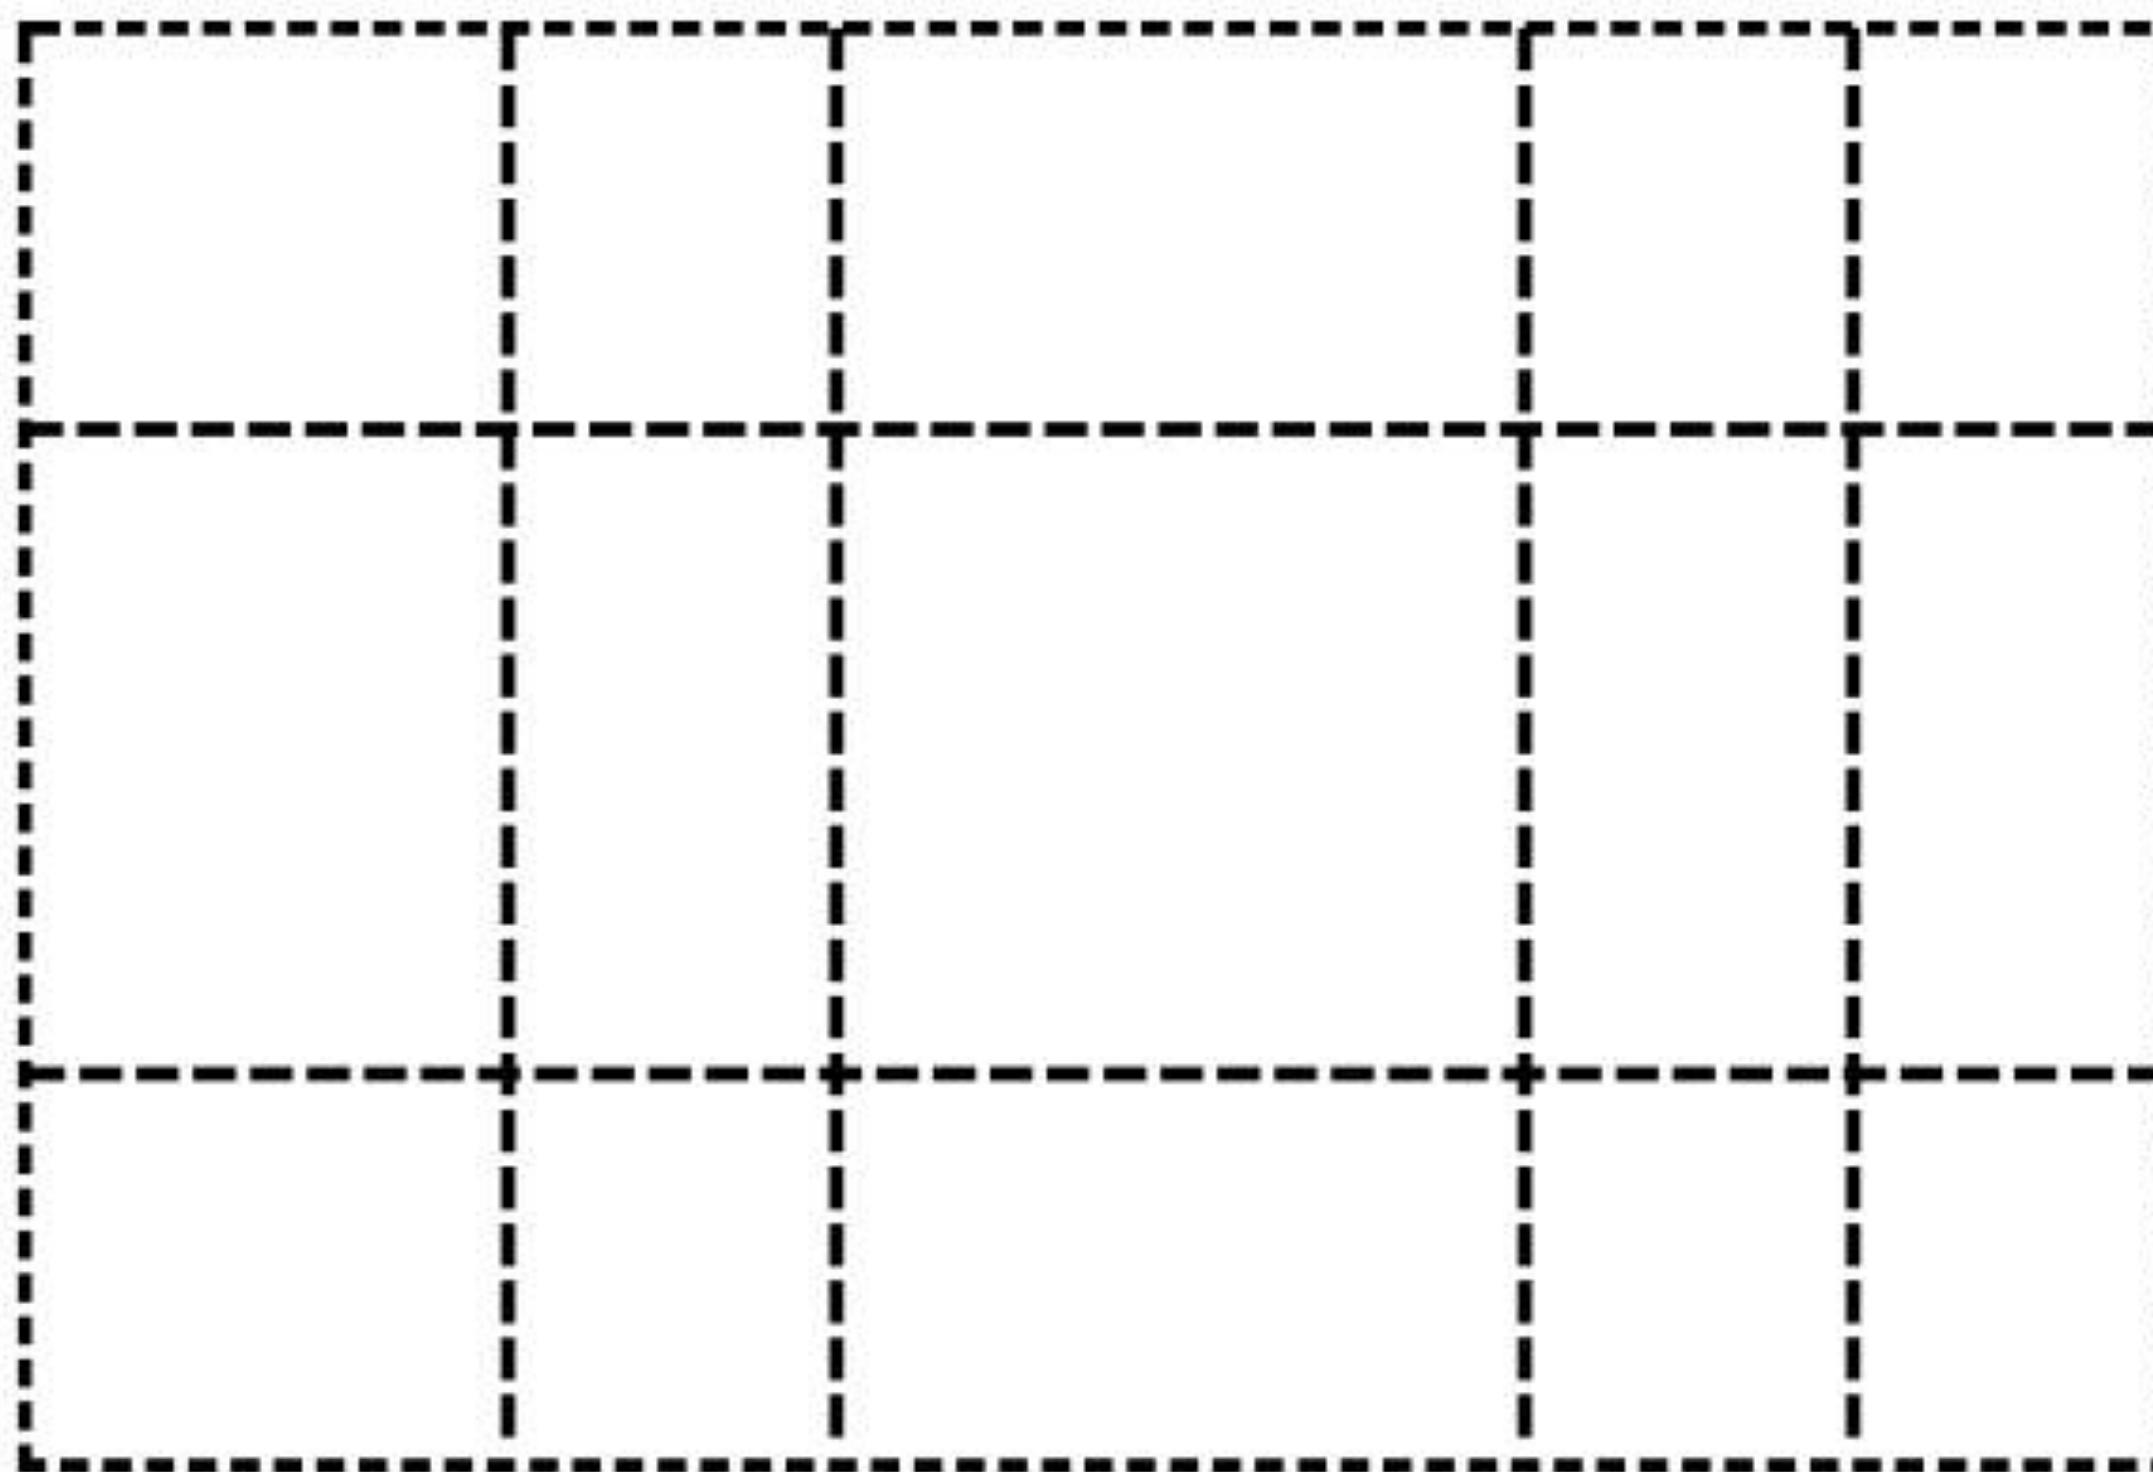

"Grid is the only layout technique that establishes a **relationship** between rows and columns of grid items."

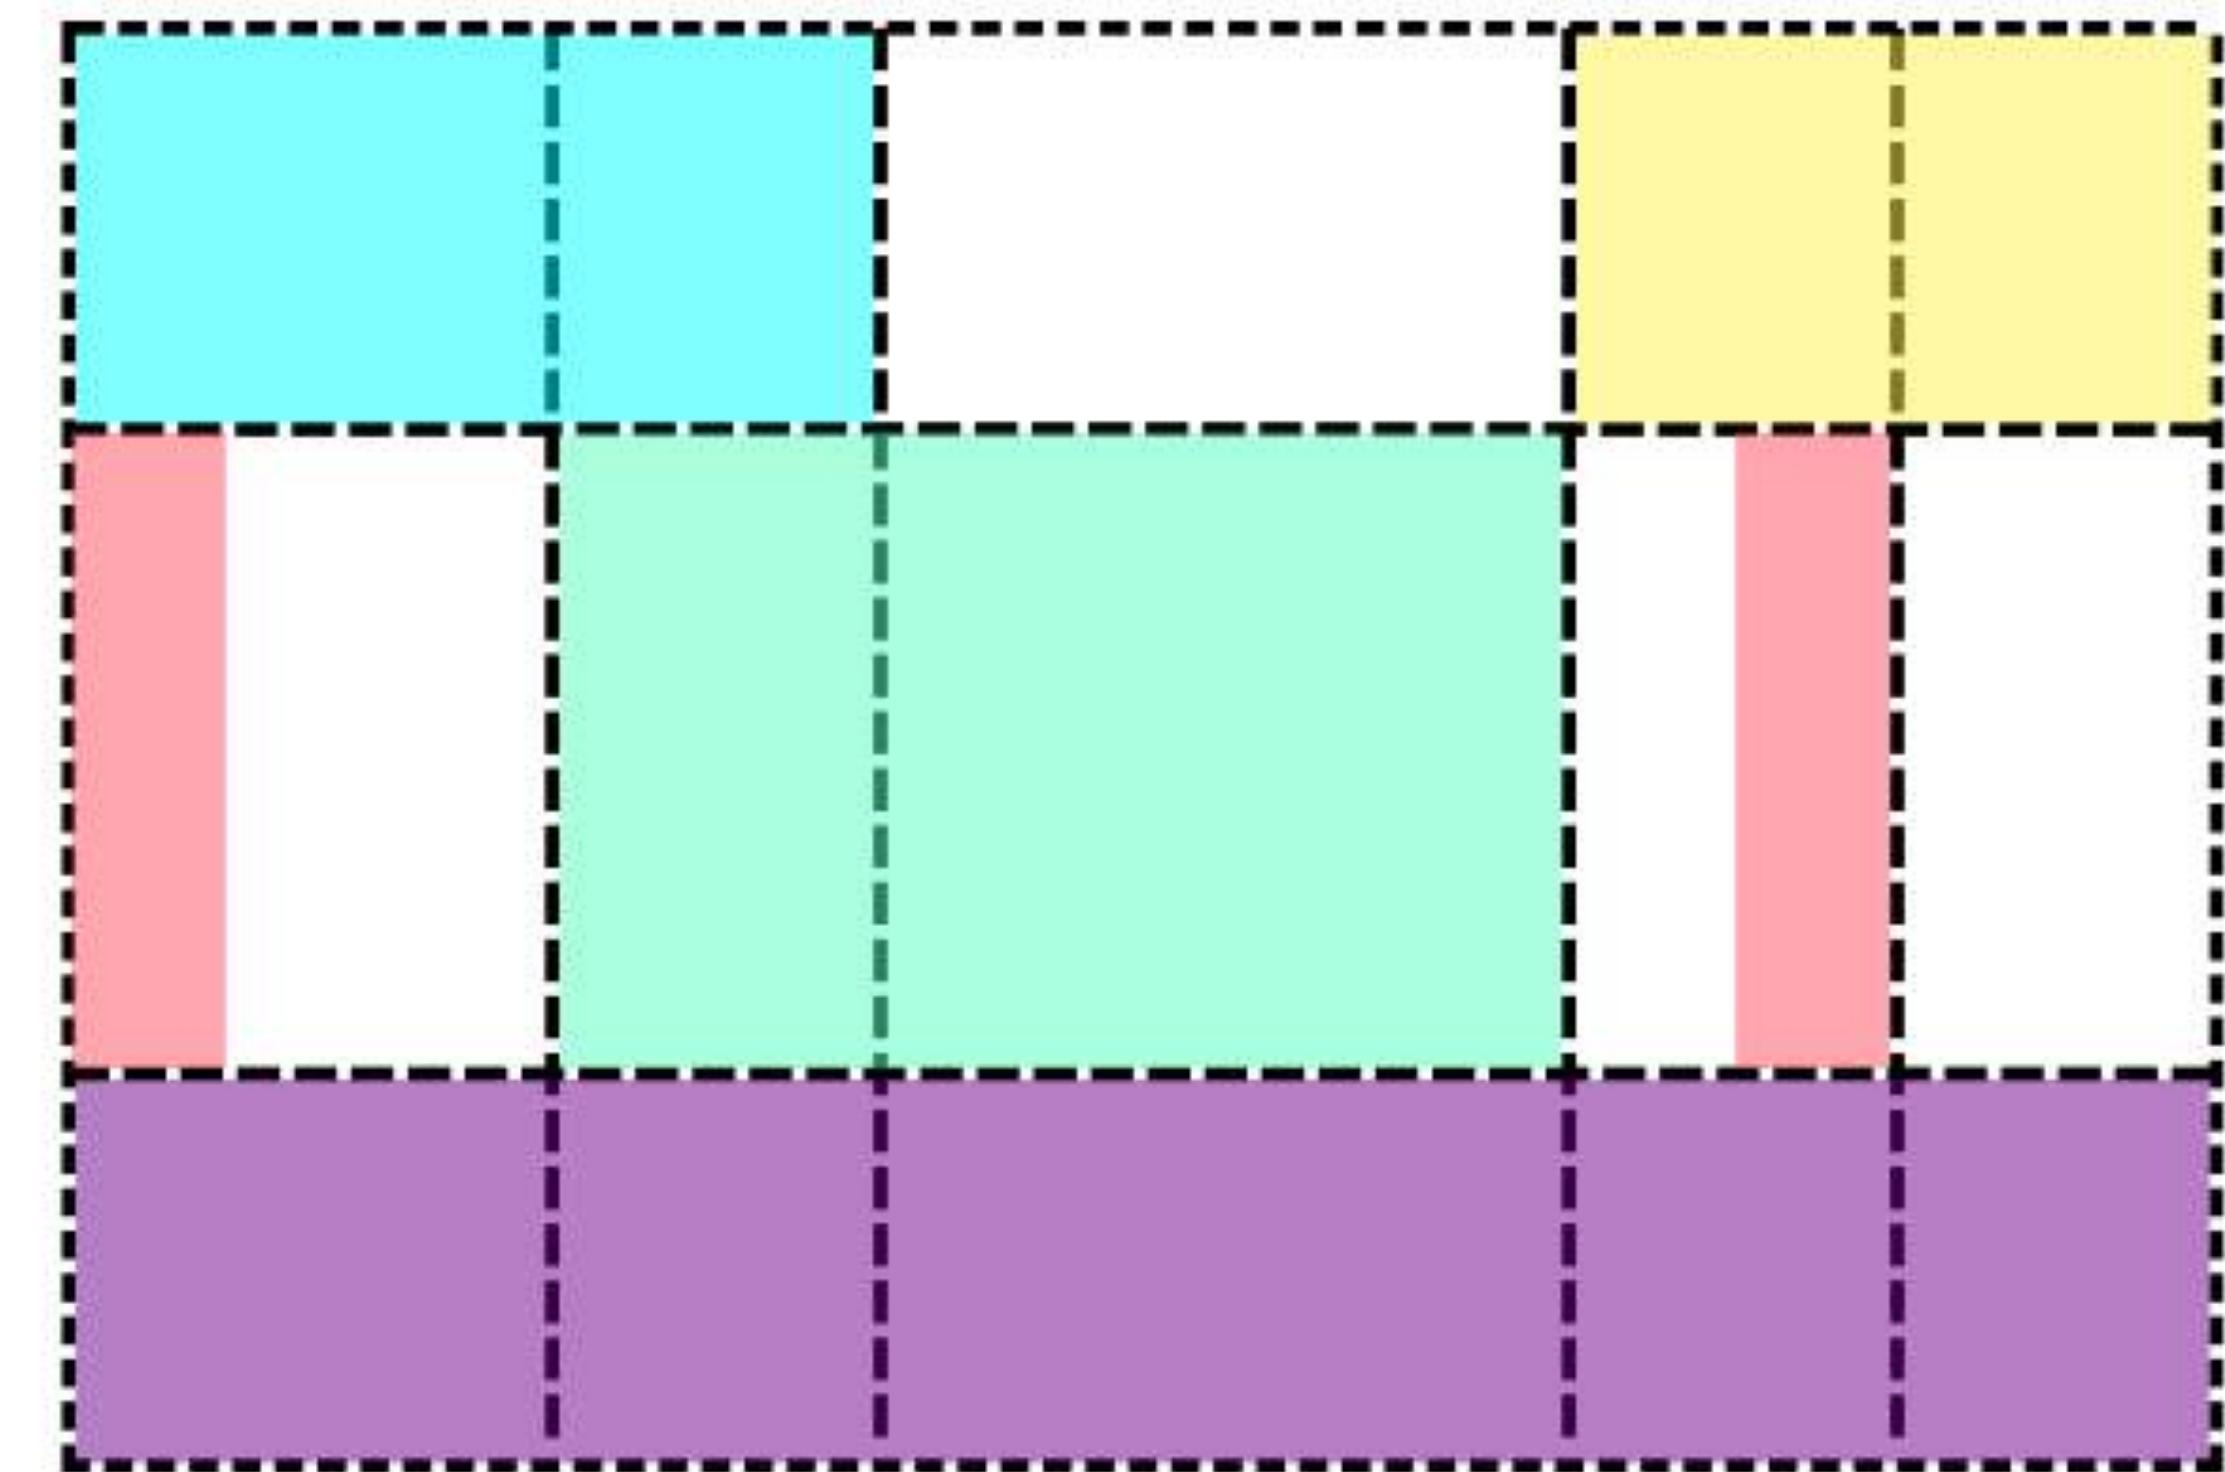

CSS grid basics

Define your grid.

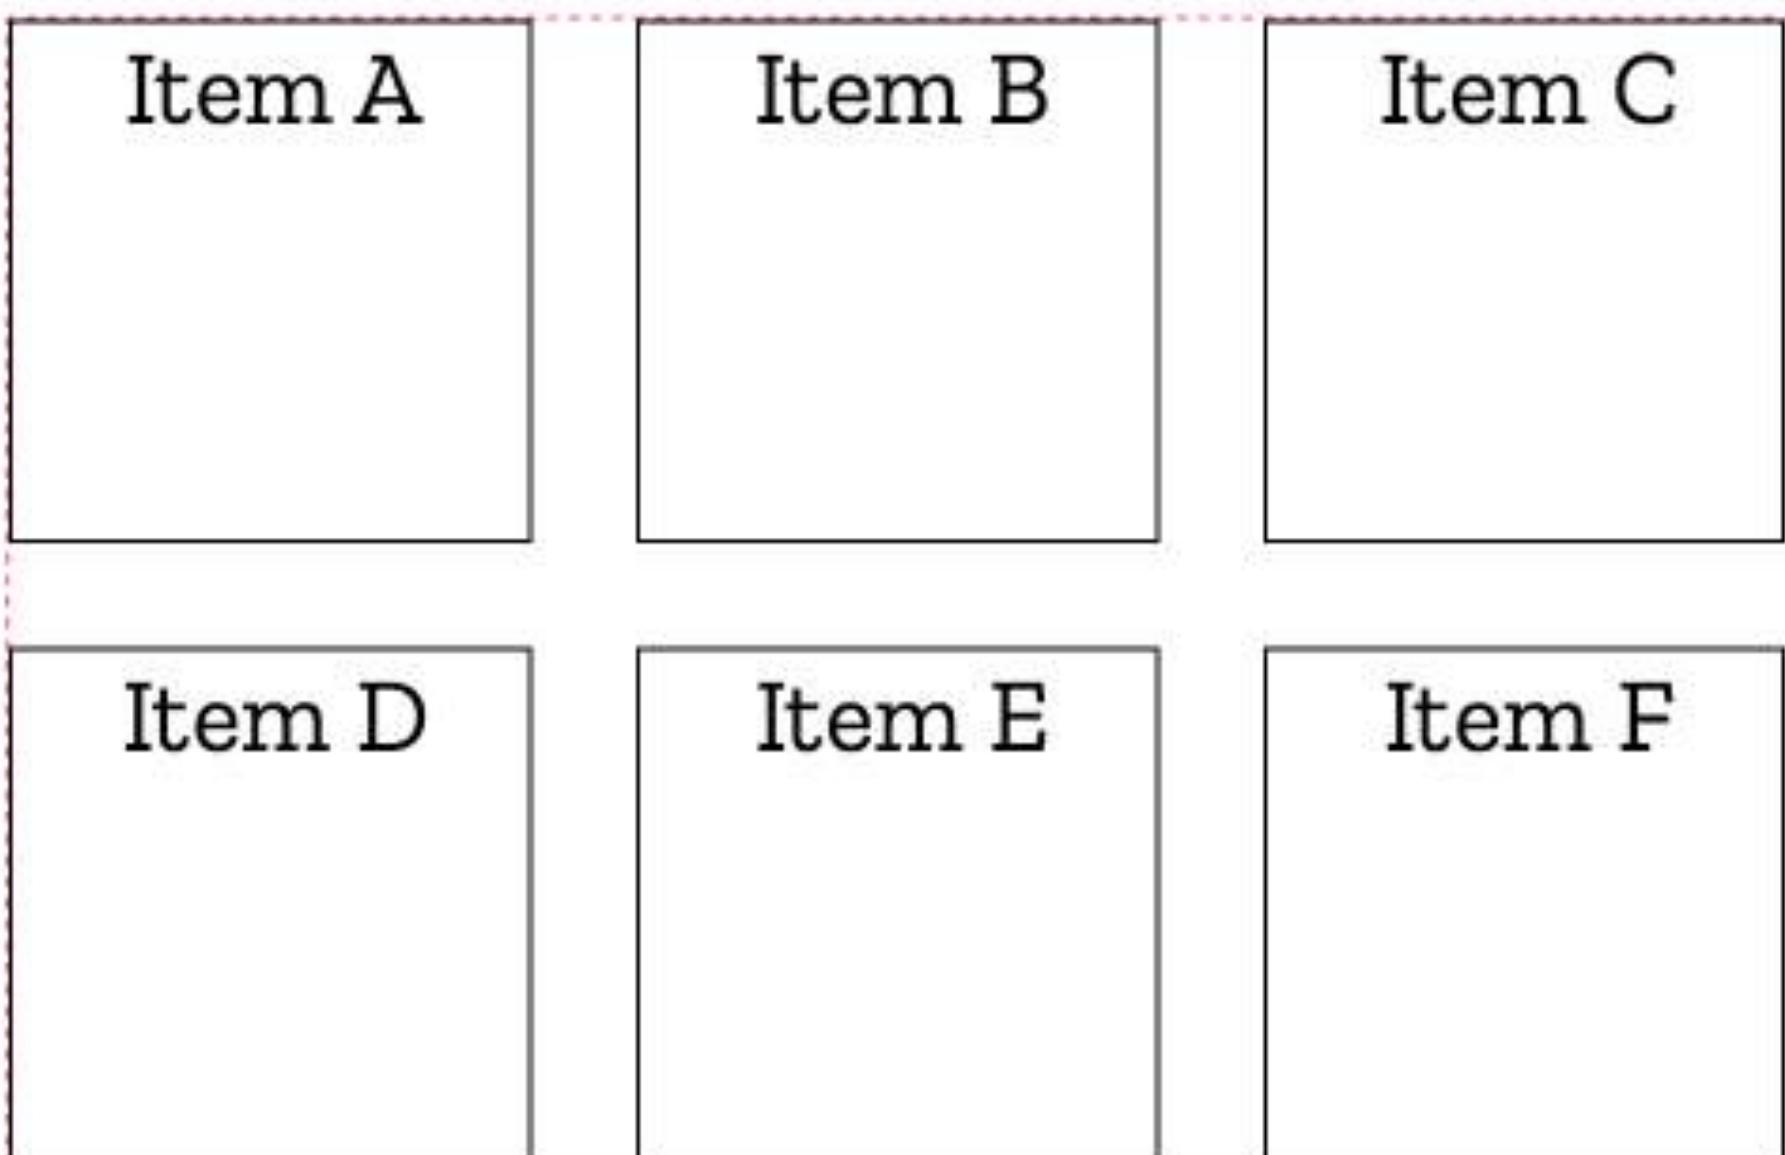

Place items in the grid.

Properties on the Grid container

Defining a grid

```
<div class="grid1">
  <div class="grid1__item">
    <p>Item A</p>
  </div>
  <div class="grid1__item">
    <p>Item B</p>
  </div>
  <div class="grid1__item">
    <p>Item C</p>
  </div>
  <div class="grid1__item">
    <p>Item D</p>
  </div>
  <div class="grid1__item">
    <p>Item E</p>
  </div>
  <div class="grid1__item">
    <p>Item F</p>
  </div>
</div>
```

```
.grid1 {
  display: grid;
  grid-template-columns: 5em 5em 5em;
  grid-template-rows: 5em 5em;
  grid-gap: 1em;
}
```

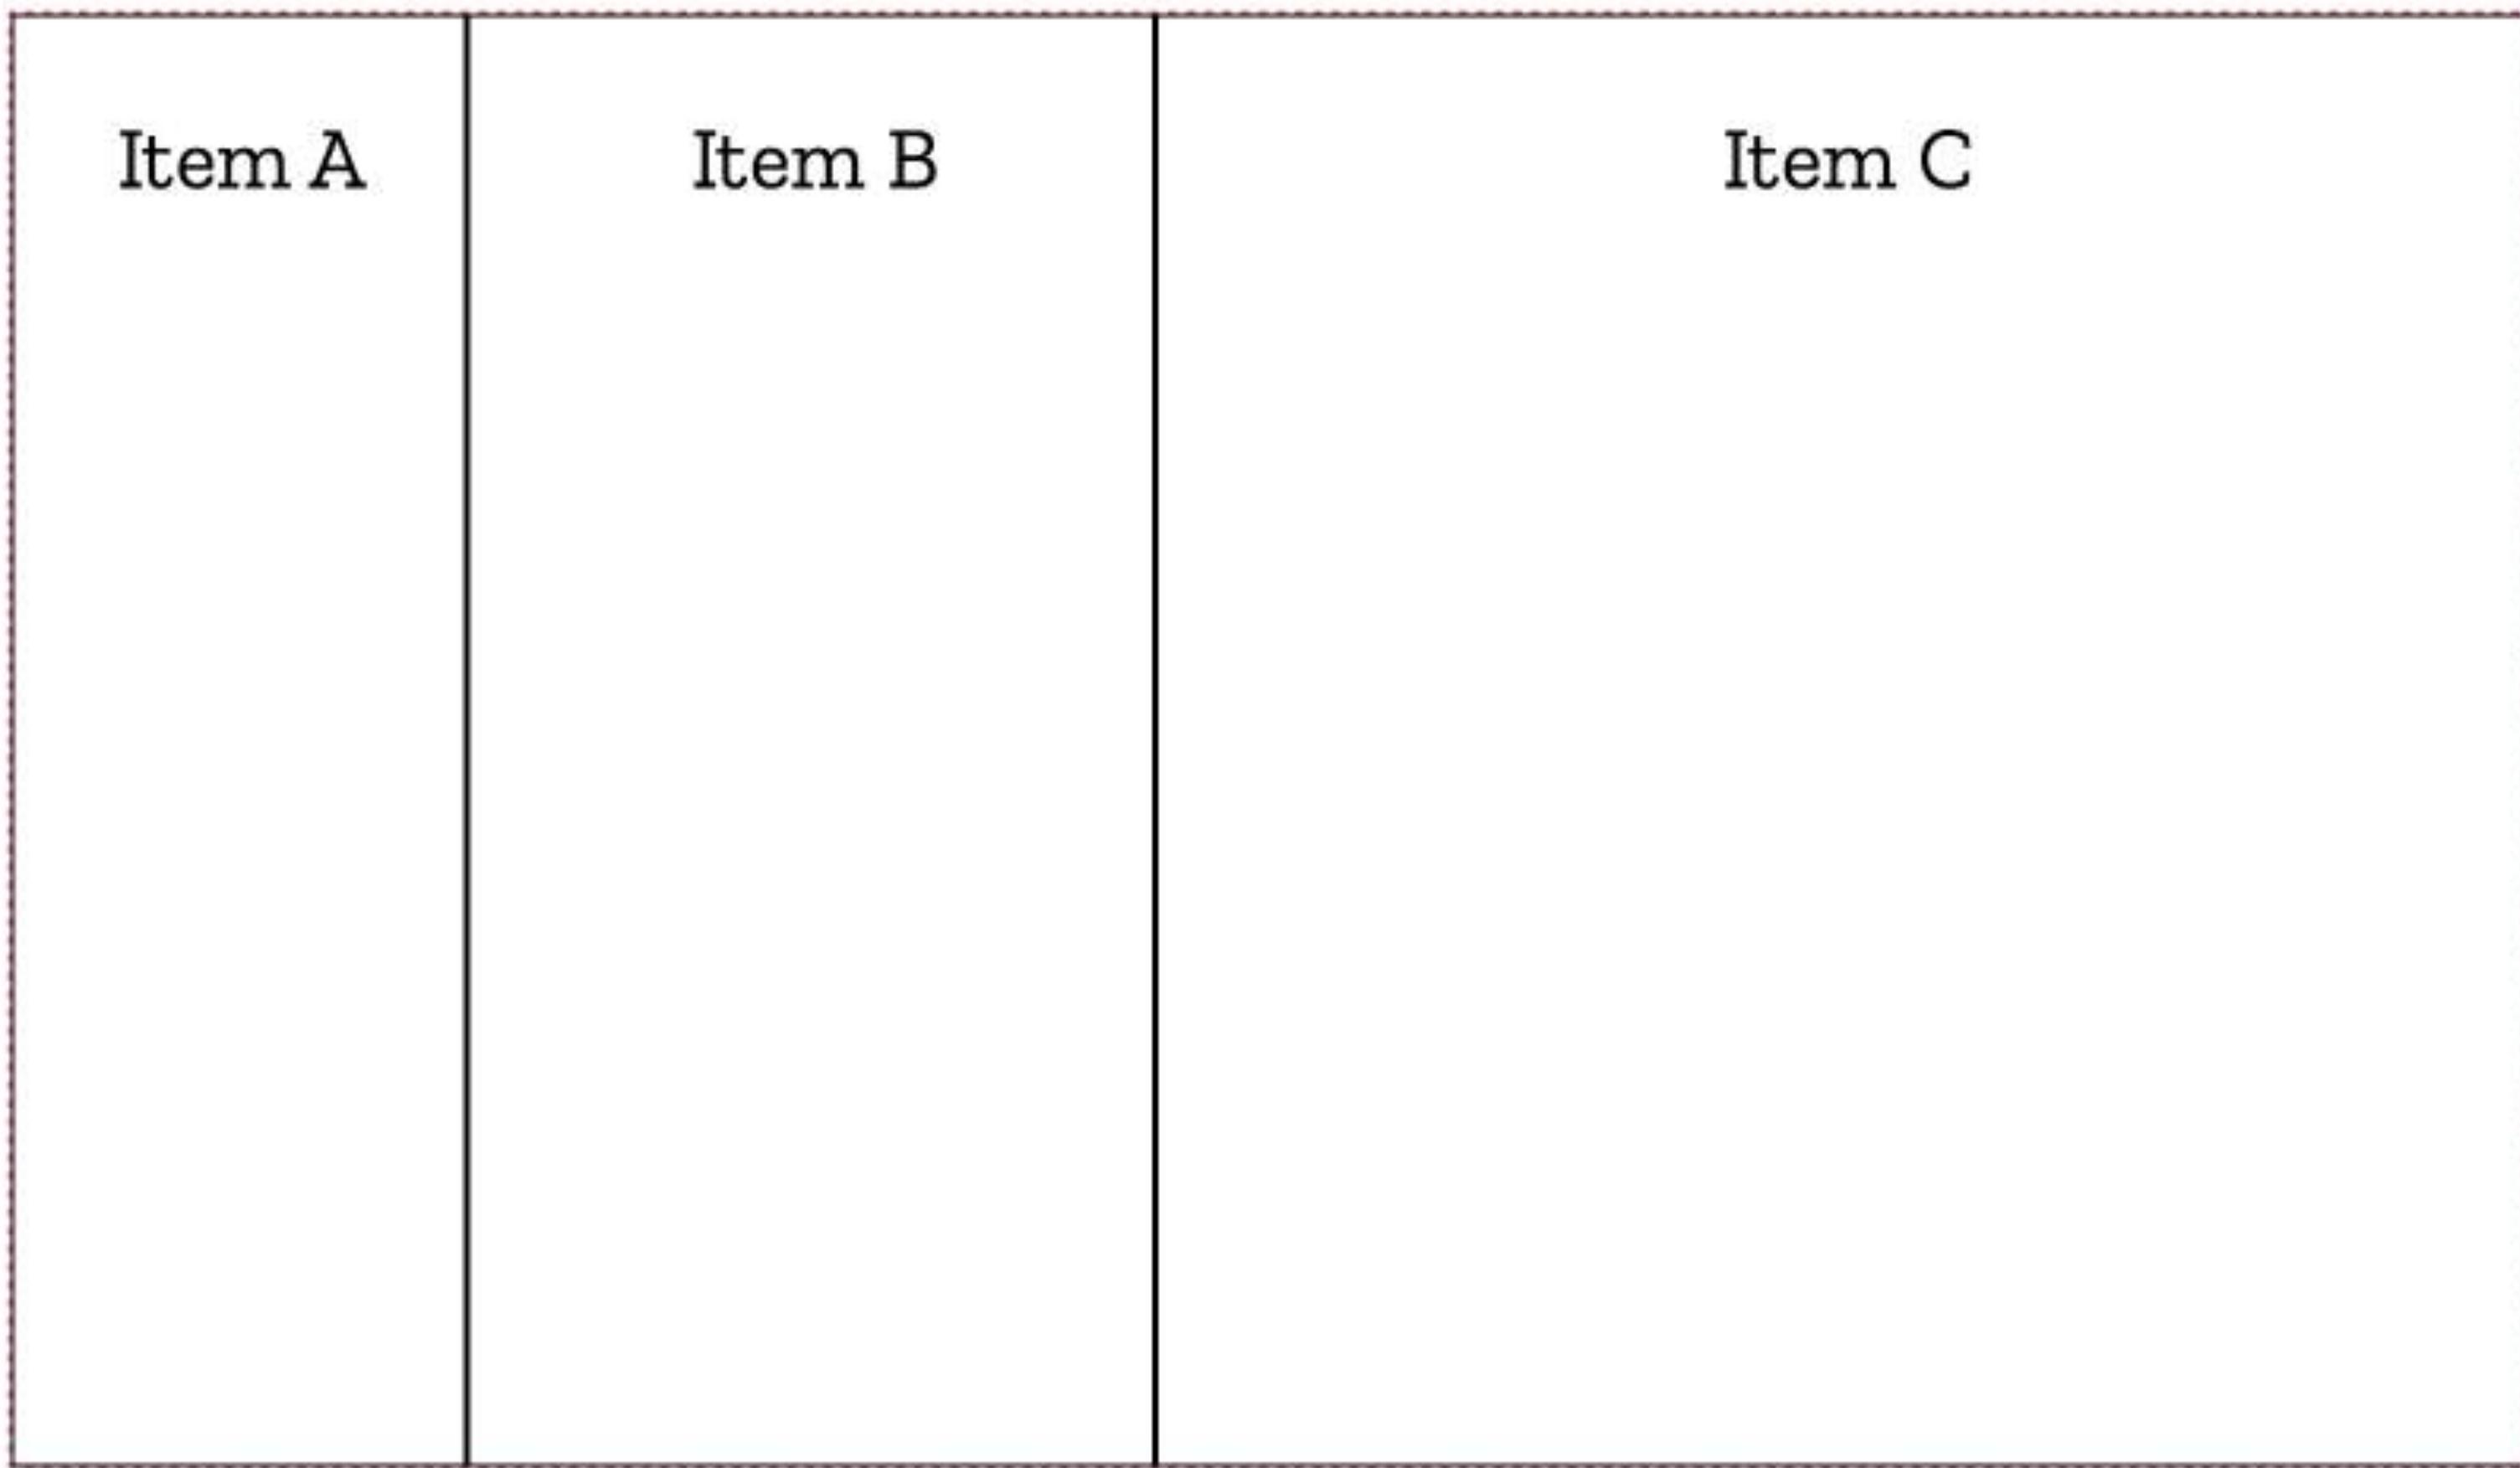

“Cede **control** of your designs to the **browsers** that render them.”

The fr unit

Represents a **fraction** of the **free space** in the grid container.

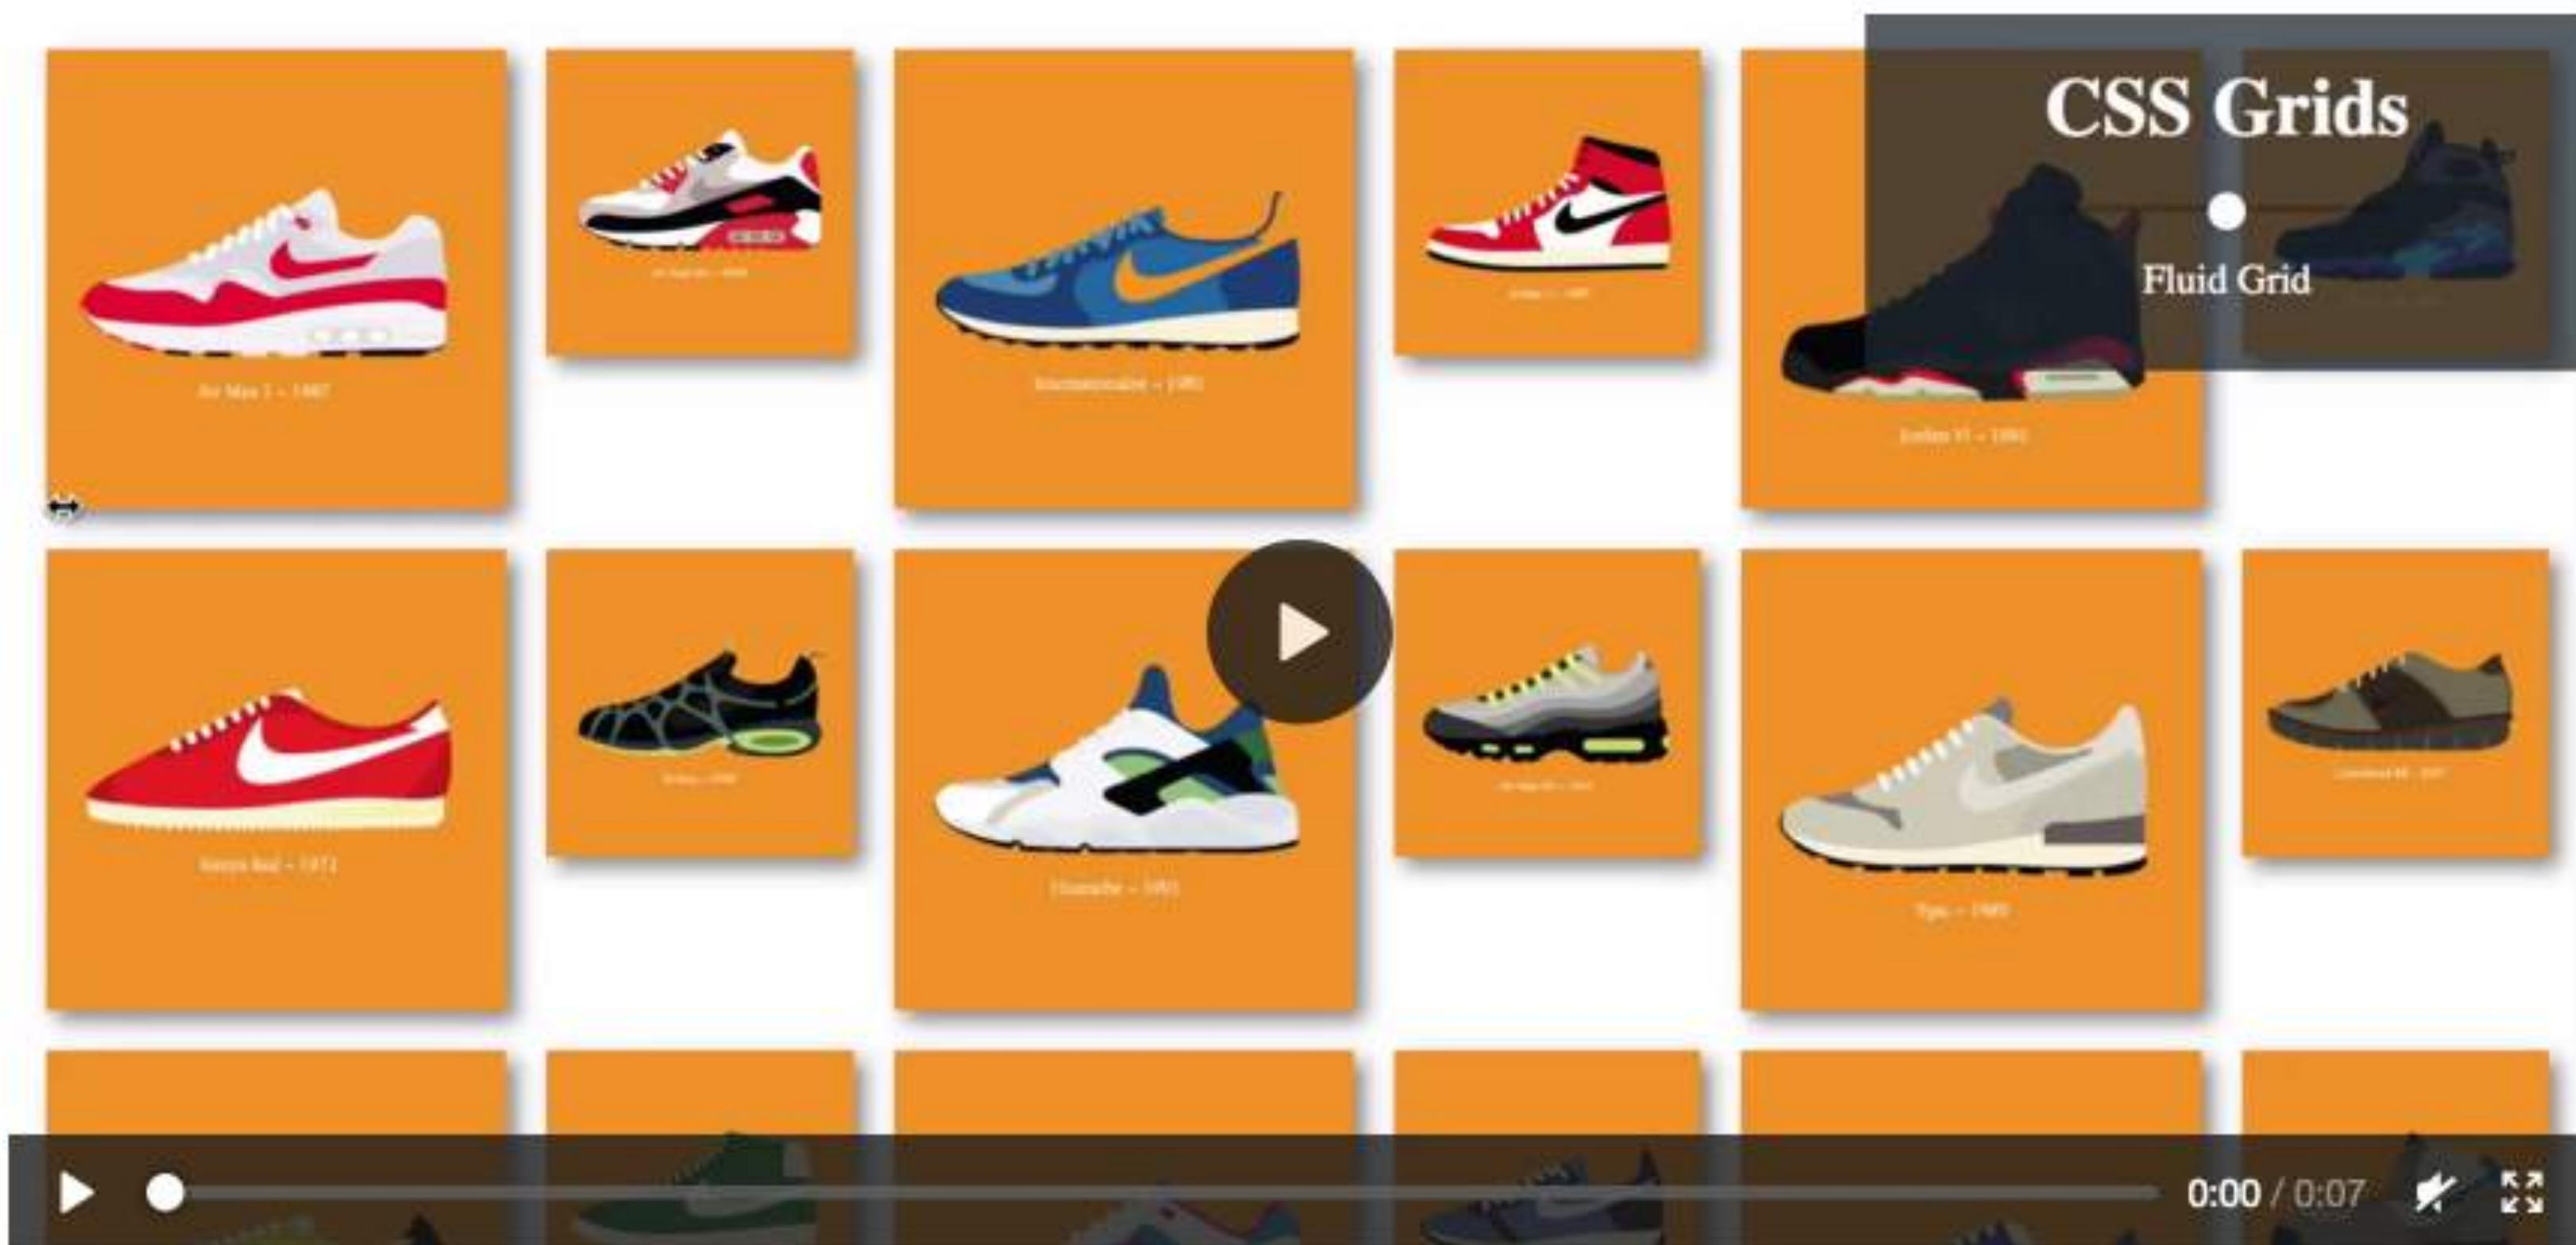

```
.grid4 {  
  display: grid;  
  grid-template-columns: 150px 1fr  
  2fr;  
}
```

Fluid CSS grid

```
.container {  
  display: grid;  
  grid-template-columns: repeat(3, 3fr 2fr);  
}
```

The minmax() function

Defines a size range for columns or rows in the grid.

Item A

Item B

Item C

```
.grid5 {  
  display: grid;  
  grid-template-columns:  
  minmax(200px, 1fr) 300px 300px;  
}
```

The repeat() function

To specify a large number of columns or rows that follow a similar pattern

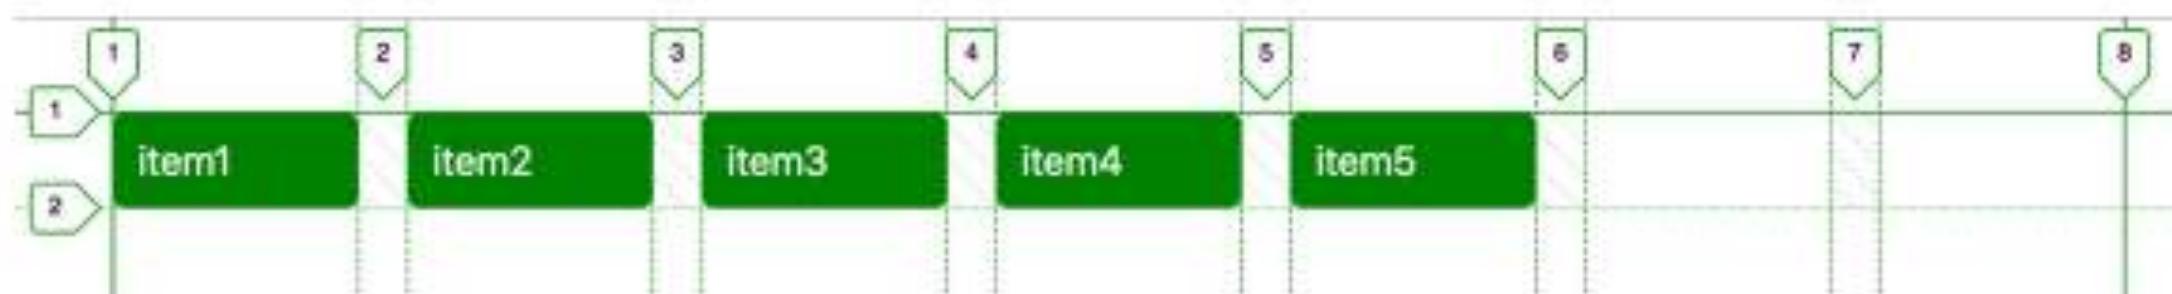

Item							
------	------	------	------	------	------	------	------

```
.grid6 {  
  display: grid;  
  grid-template-columns: repeat(4,  
  75px 120px);  
}
```

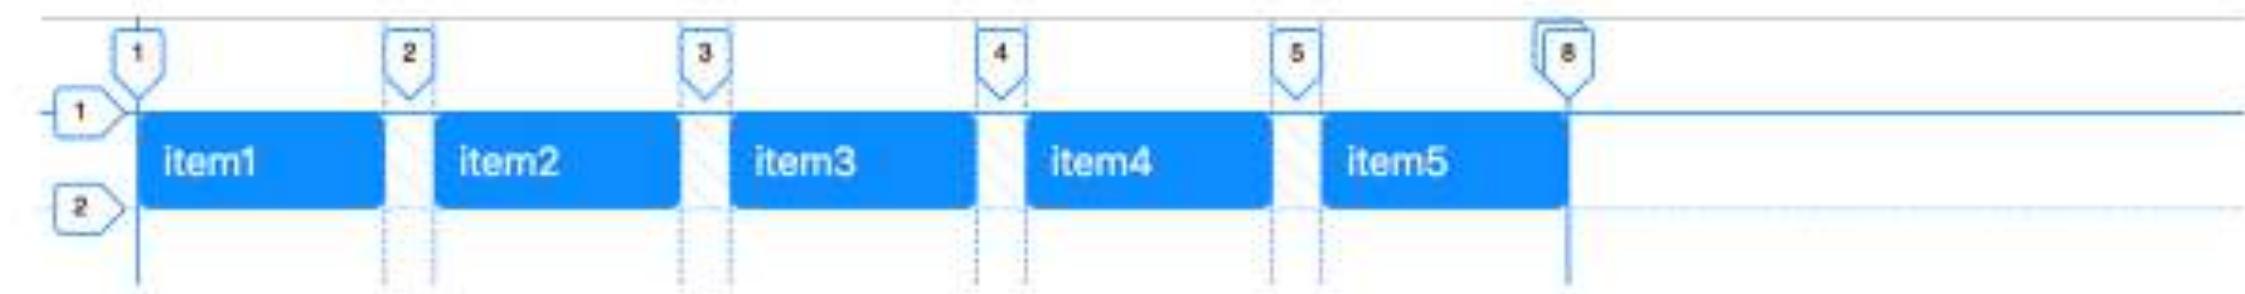

auto-fill vs. auto-fit

Allow browser to determine how many tracks to create depending on track size.

```
repeat(auto-fill, 100px);
```

```
repeat(auto-fit, 100px);
```

auto-fit collapses empty tracks.

auto-fill versus auto-fit

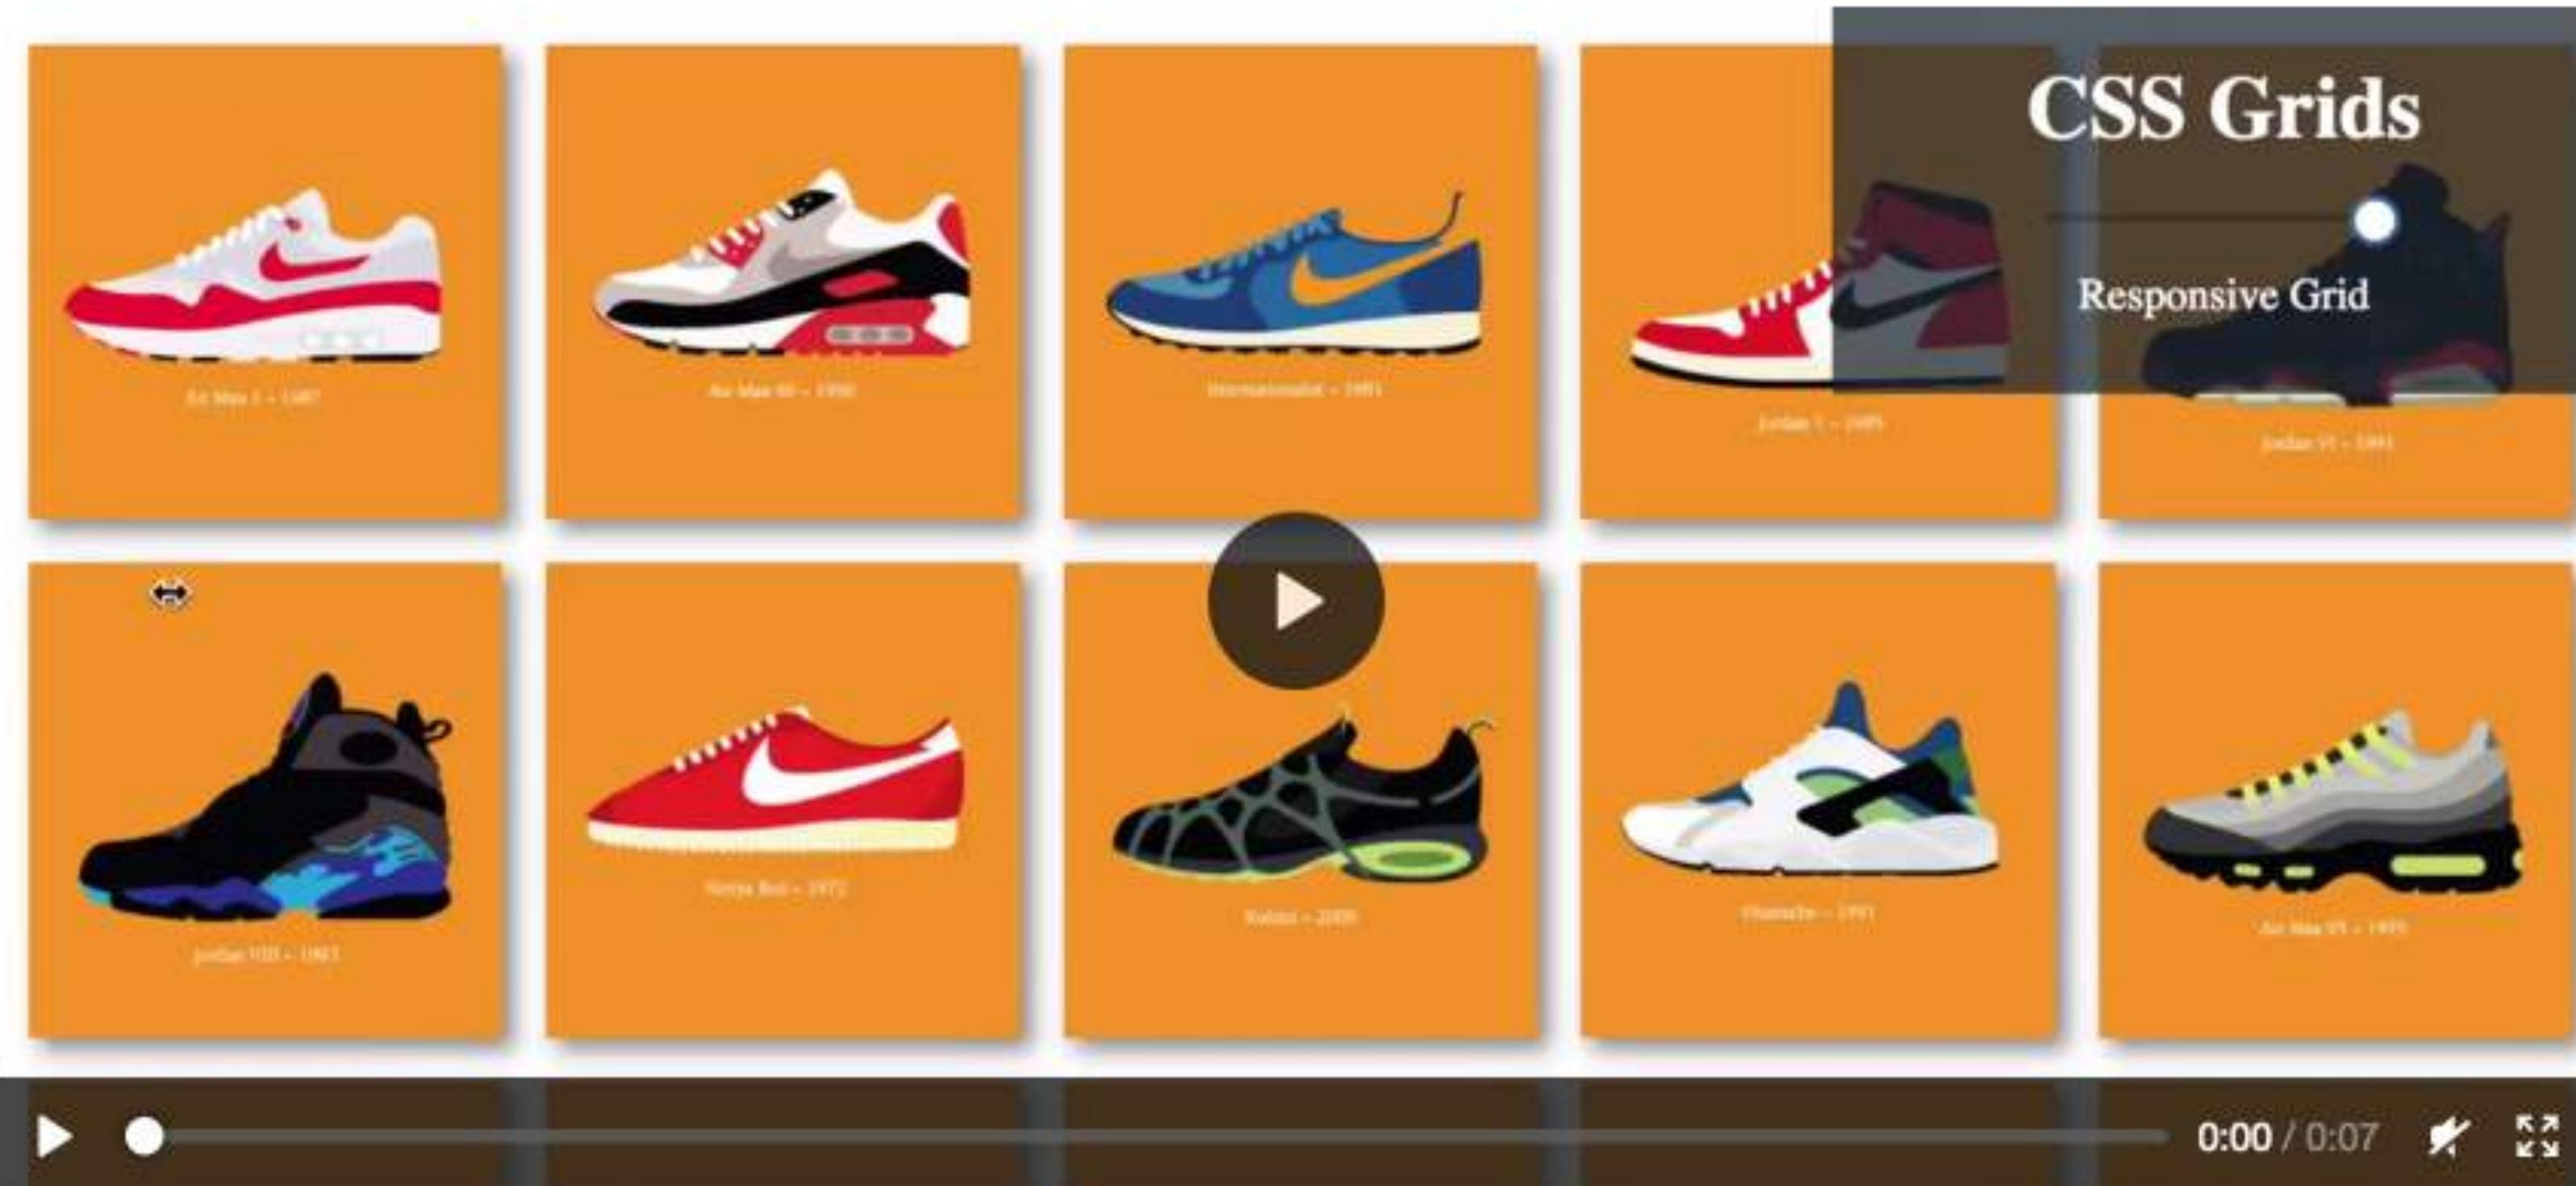

A	B	C	D	E	F
---	---	---	---	---	---

```
.keyword {  
  display: grid;  
  grid-template-columns:  
  repeat(auto-fill, minmax(100px,  
  1fr));  
}
```

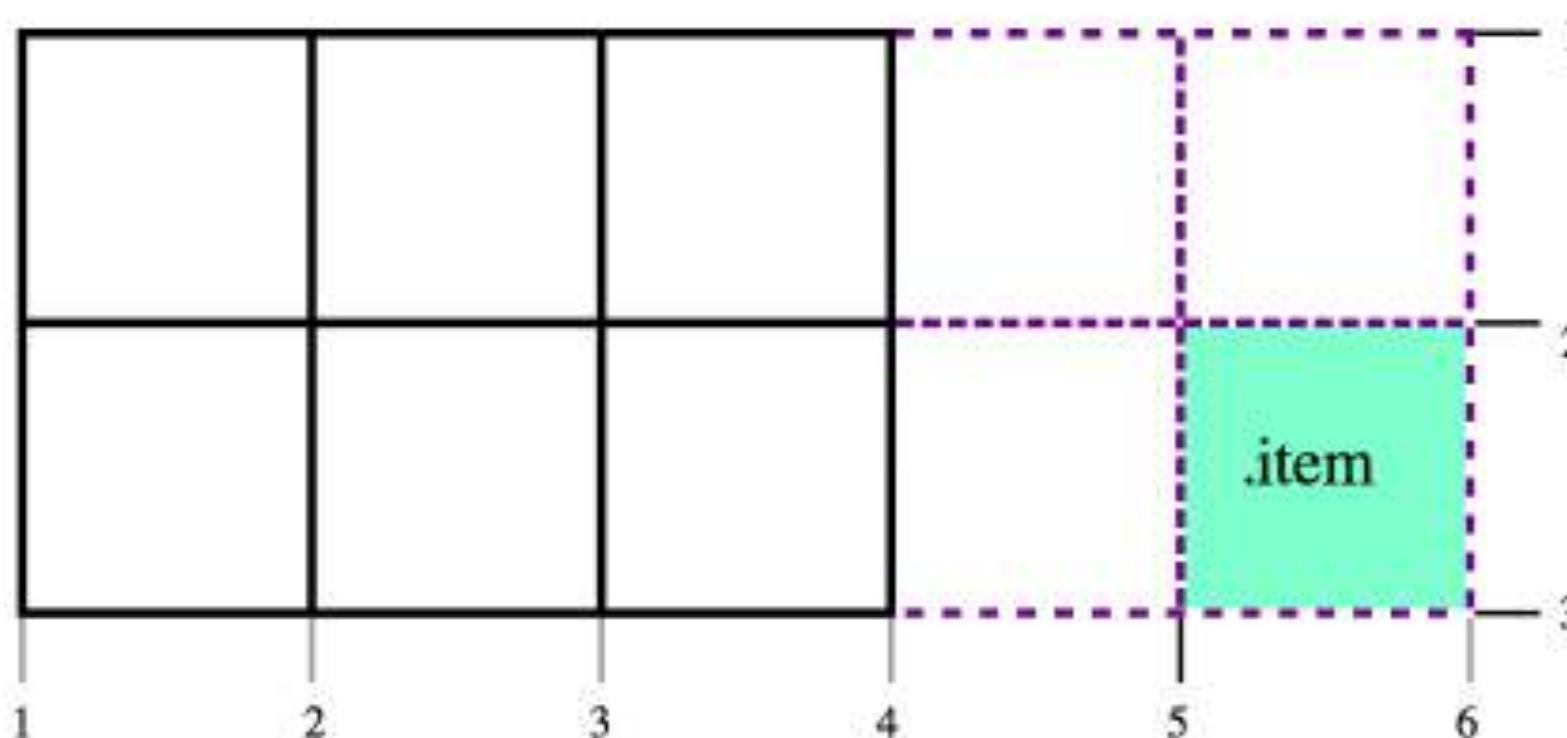

Responsive grid without media queries

```
.container {  
  display: grid;  
  grid-template-columns: repeat(auto-fill, minmax(10em, 1fr));  
}
```

Explicit Grid and Implicit Grid

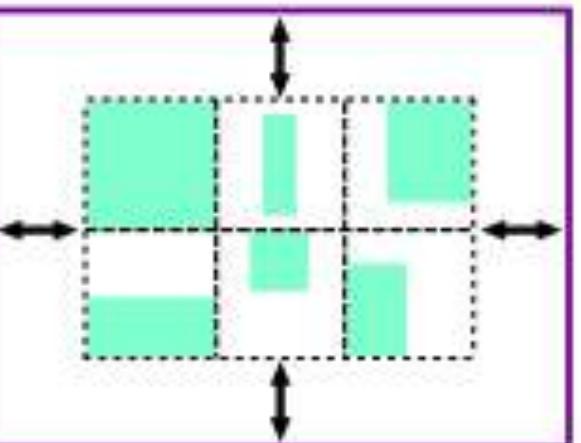

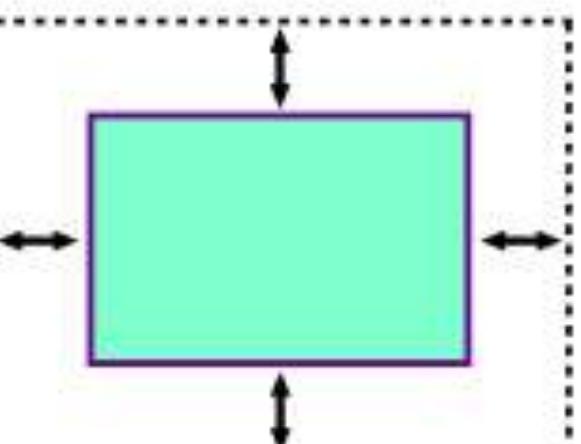

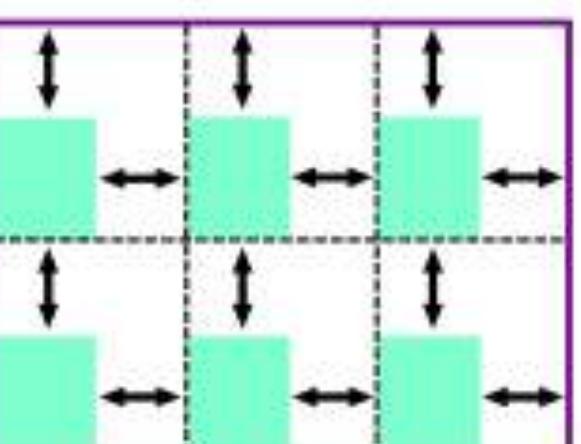

```
.grid-container {  
  display: grid;  
  grid-template-columns: 150px 150px 150px; /* three columns */  
  grid-template-rows: 150px 150px; /* two rows */  
}  
  
.item {  
  grid-column: 5 / 6; /* grid-column-start: 5; grid-column-end: 6 */  
  grid-row: 2 / 3; /* grid-row-start: 2; grid-row-end: 3; */  
}
```

The browser will create an implicit grid to hold items placed outside the grid.

Aligning your grid items

Property	Axis	Aligns	Applies to
justify-content	main/inline	content within element (effectively adjusts padding)	 A diagram of a grid container with four items. The grid has two columns and two rows. The items are represented by green squares. The main axis (horizontal) has arrows at both ends, indicating space available for the items. The cross axis (vertical) has arrows at both ends, indicating space available for the items.
<td>cross/block</td> <td></td> <td>block containers, flex containers and grid containers</td>	cross/block		block containers, flex containers and grid containers
justify-self	inline	element within parent (effectively adjusts margins)	 A diagram of a single block-level box represented by a green rectangle. It is enclosed in a dashed box, which represents its parent's margin box. Arrows indicate the horizontal space available for the box within its parent's margin box.
<td>cross/block</td> <td></td> <td>absolutely-positioned boxes, flex items and grid items</td>	cross/block		absolutely-positioned boxes, flex items and grid items
justify-items	inline	items inside box (controls child items)	 A diagram of a grid container with four items. The grid has two columns and two rows. The items are represented by green squares. The main axis (horizontal) has arrows at both ends, indicating space available for the items. The cross axis (vertical) has arrows at both ends, indicating space available for the items.
<td>cross/block</td> <td></td> <td>flex-containers and grid-containers</td>	cross/block		flex-containers and grid-containers

That's more like it

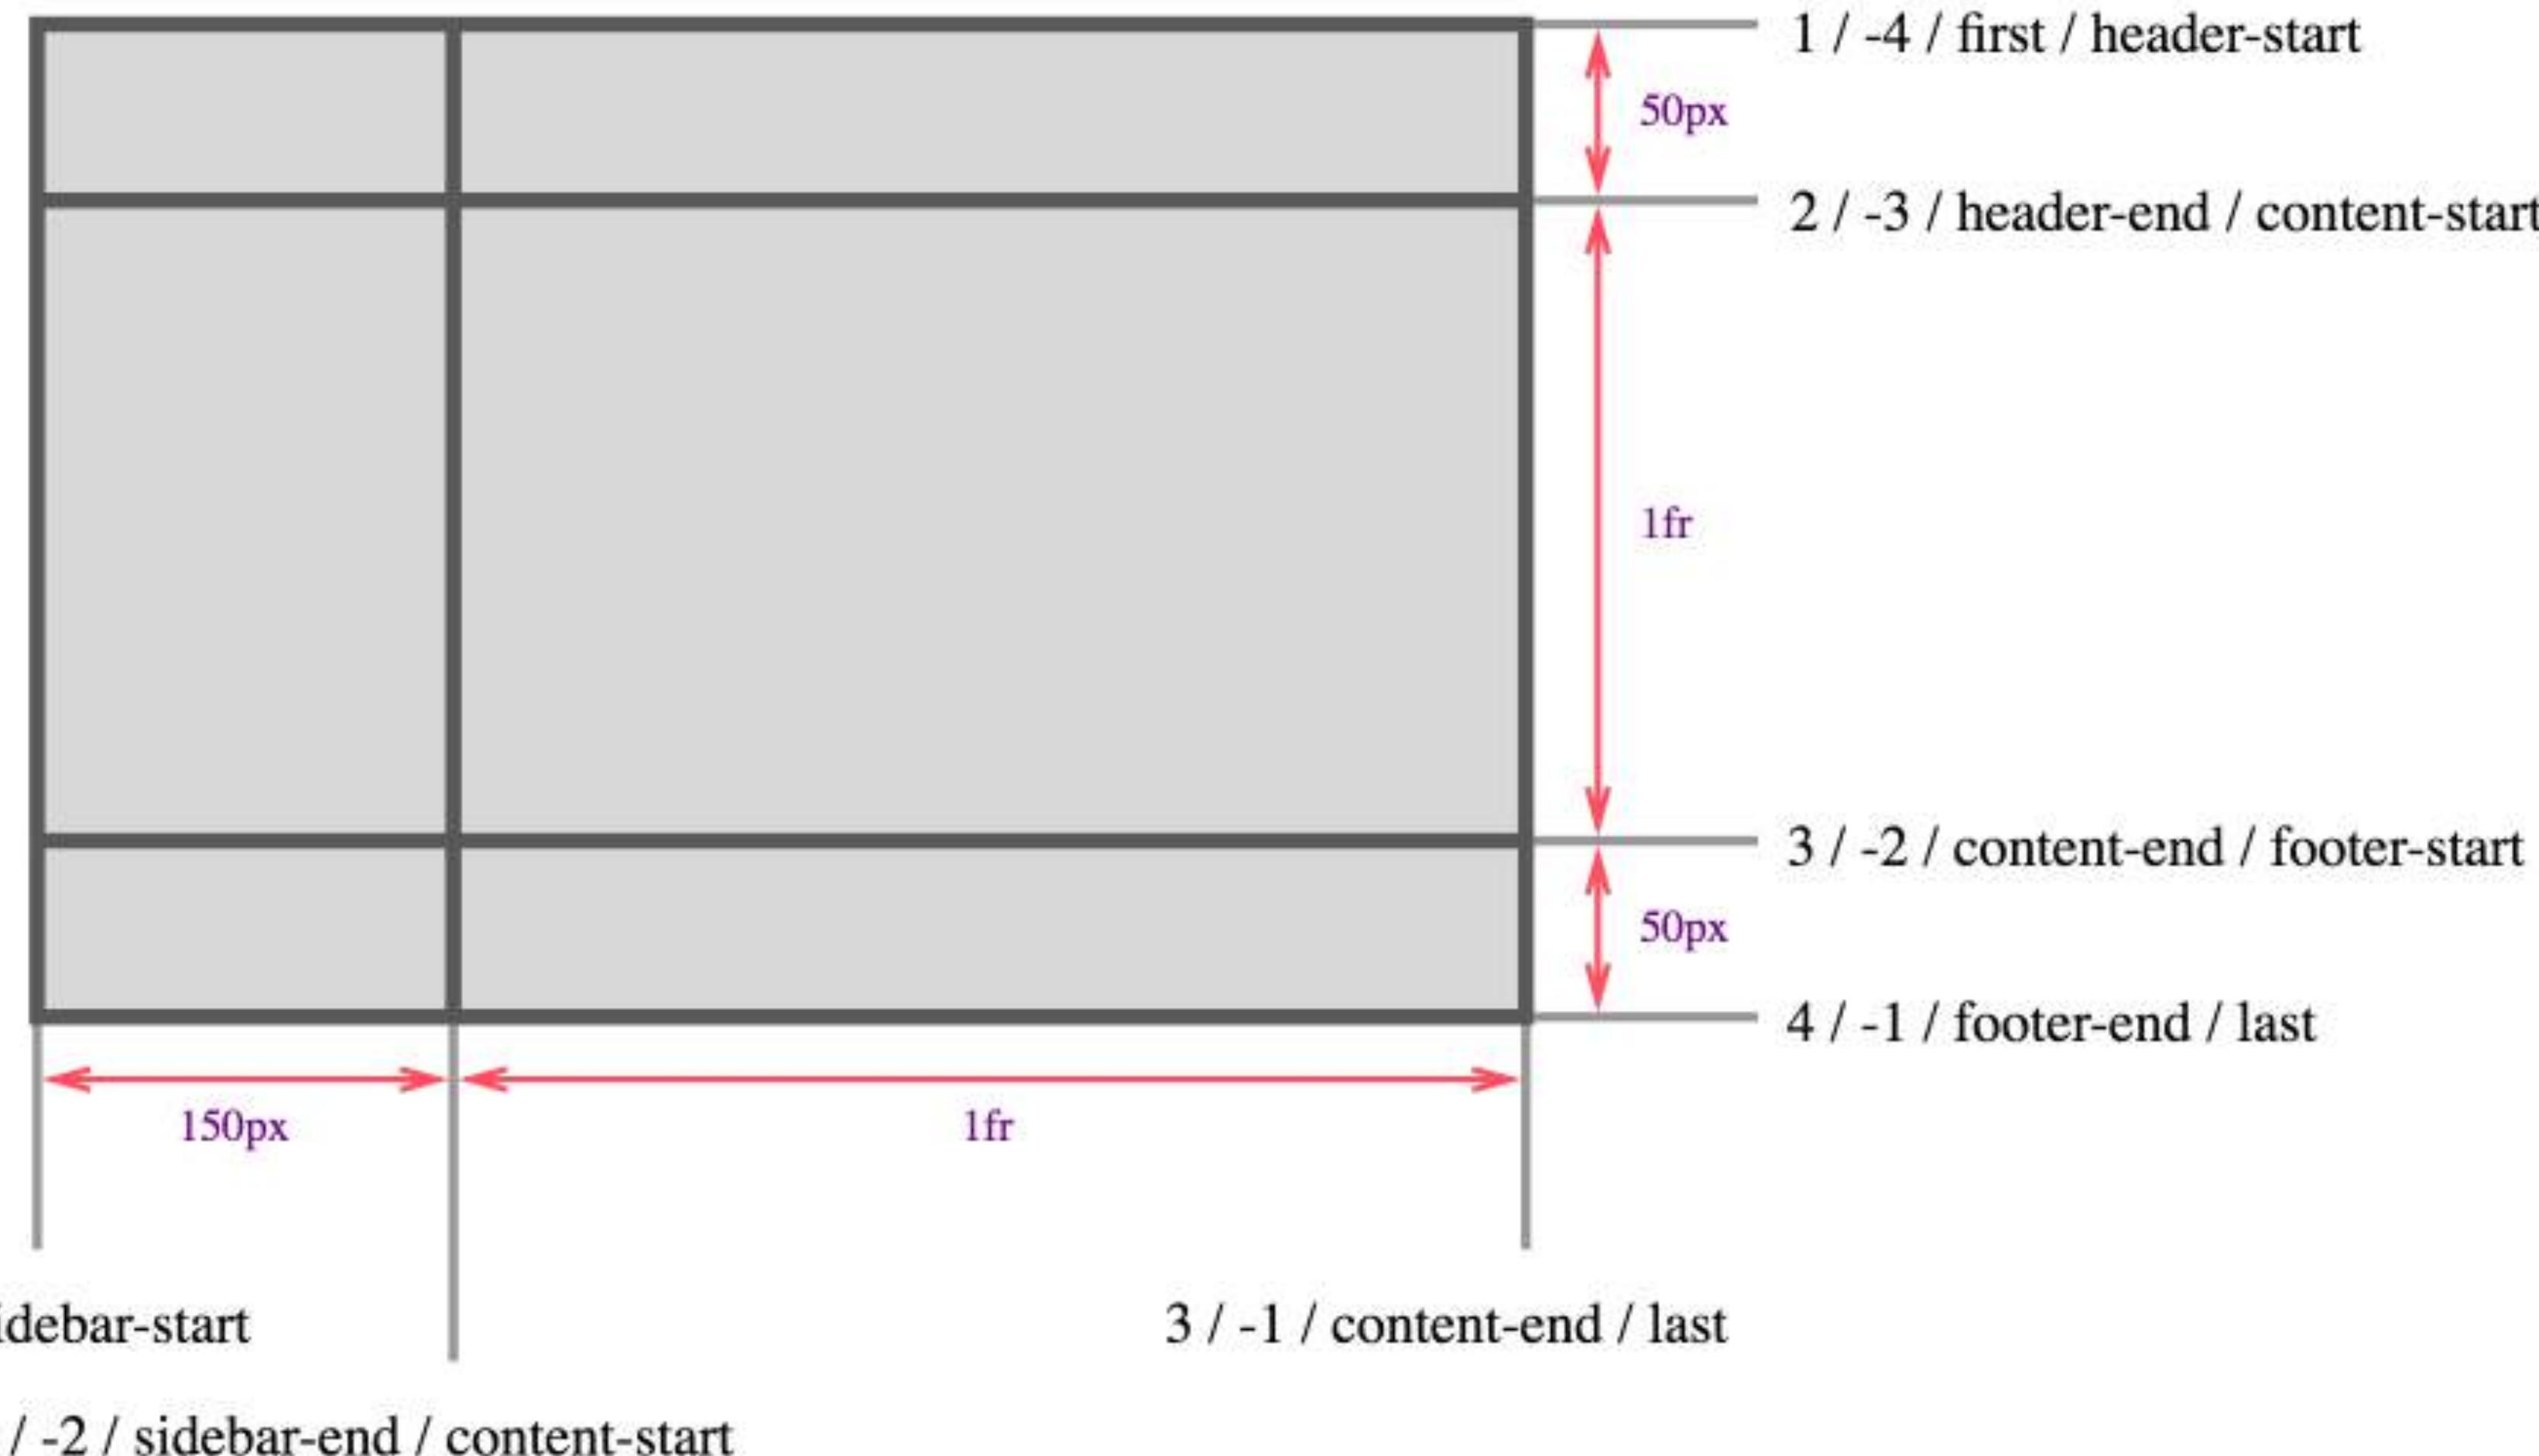

Properties on the grid item

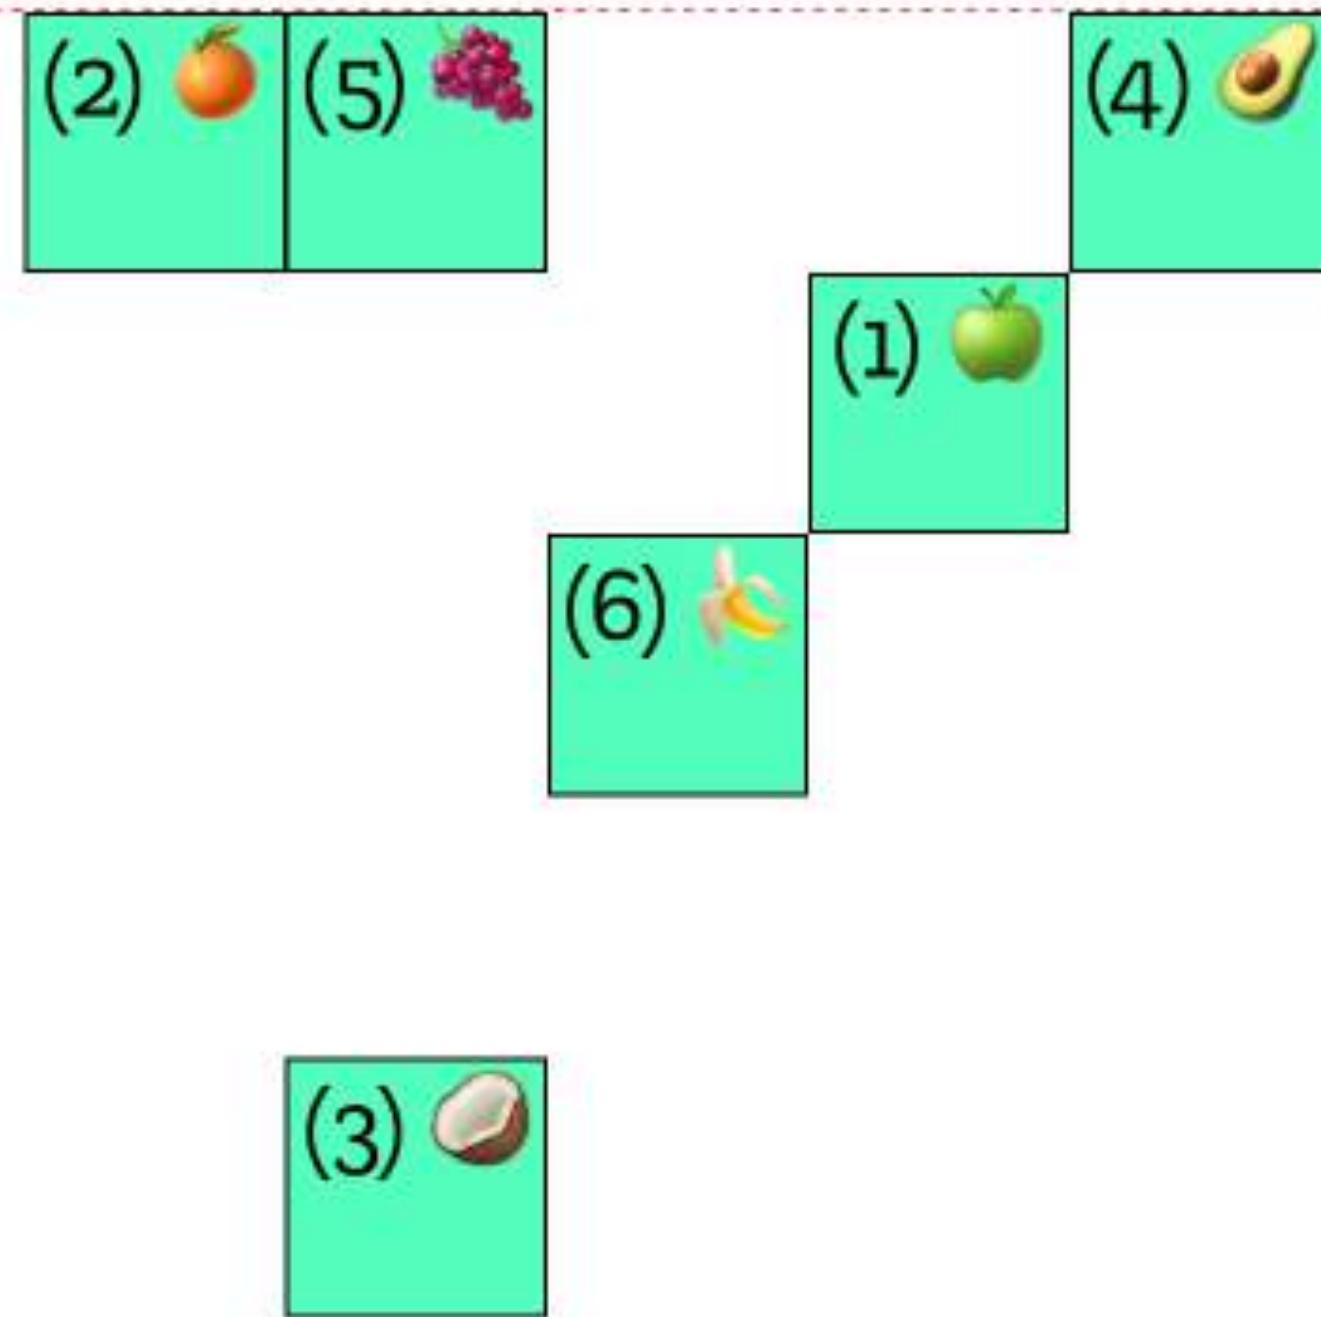

Grid placement with grid lines / named lines

```
grid-template-columns: [first sidebar-start] 250px [sidebar-end content-start] 1fr [content-end last]
grid-template-rows: [first header-start] 100px [header-end content-start] 1fr [content-end footer-st
```

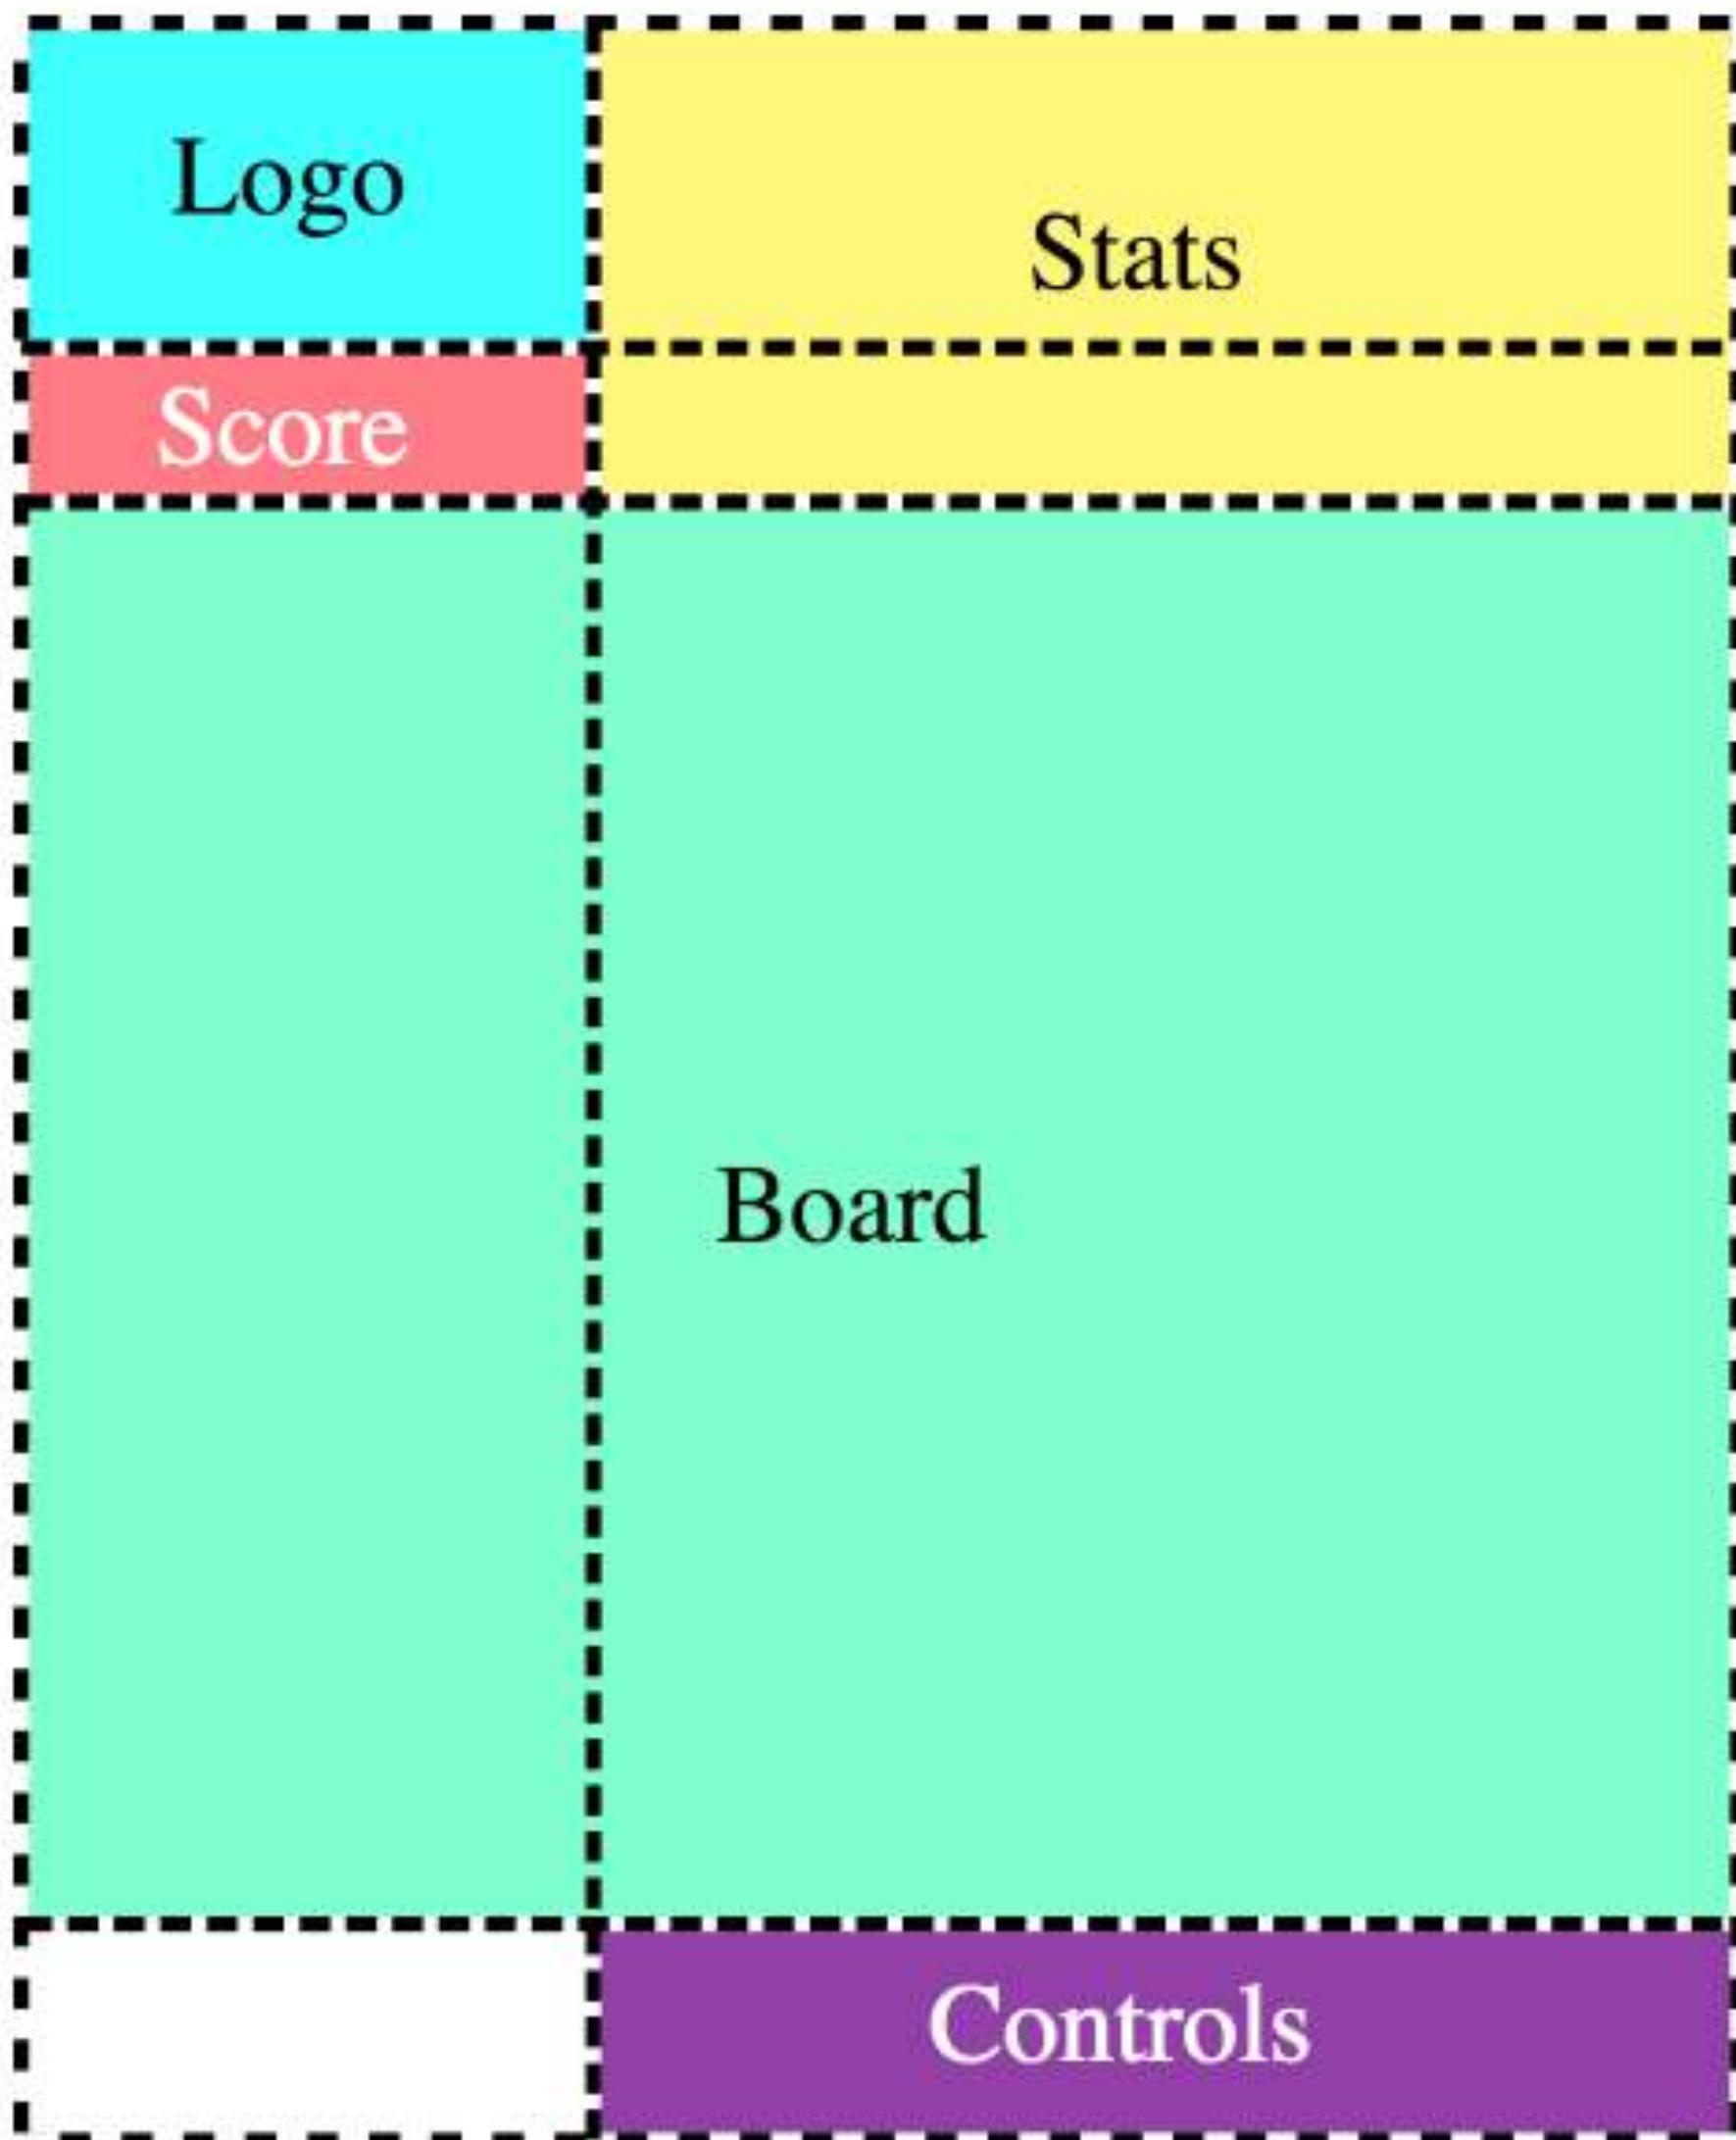

Using grid-column and grid-row

```
.grid7 {  
  display: grid;  
  grid-template-columns: repeat(6,  
  2.5em);  
  grid-template-rows: repeat(6,  
  2.5em);  
  justify-content: center;  
}  
  
.grid7__item:nth-child(1) {  
  grid-column: 4;  
  grid-row: 2;  
}  
  
.grid7__item:nth-child(3) {  
  grid-column: 2;  
  grid-row: 5;  
}
```

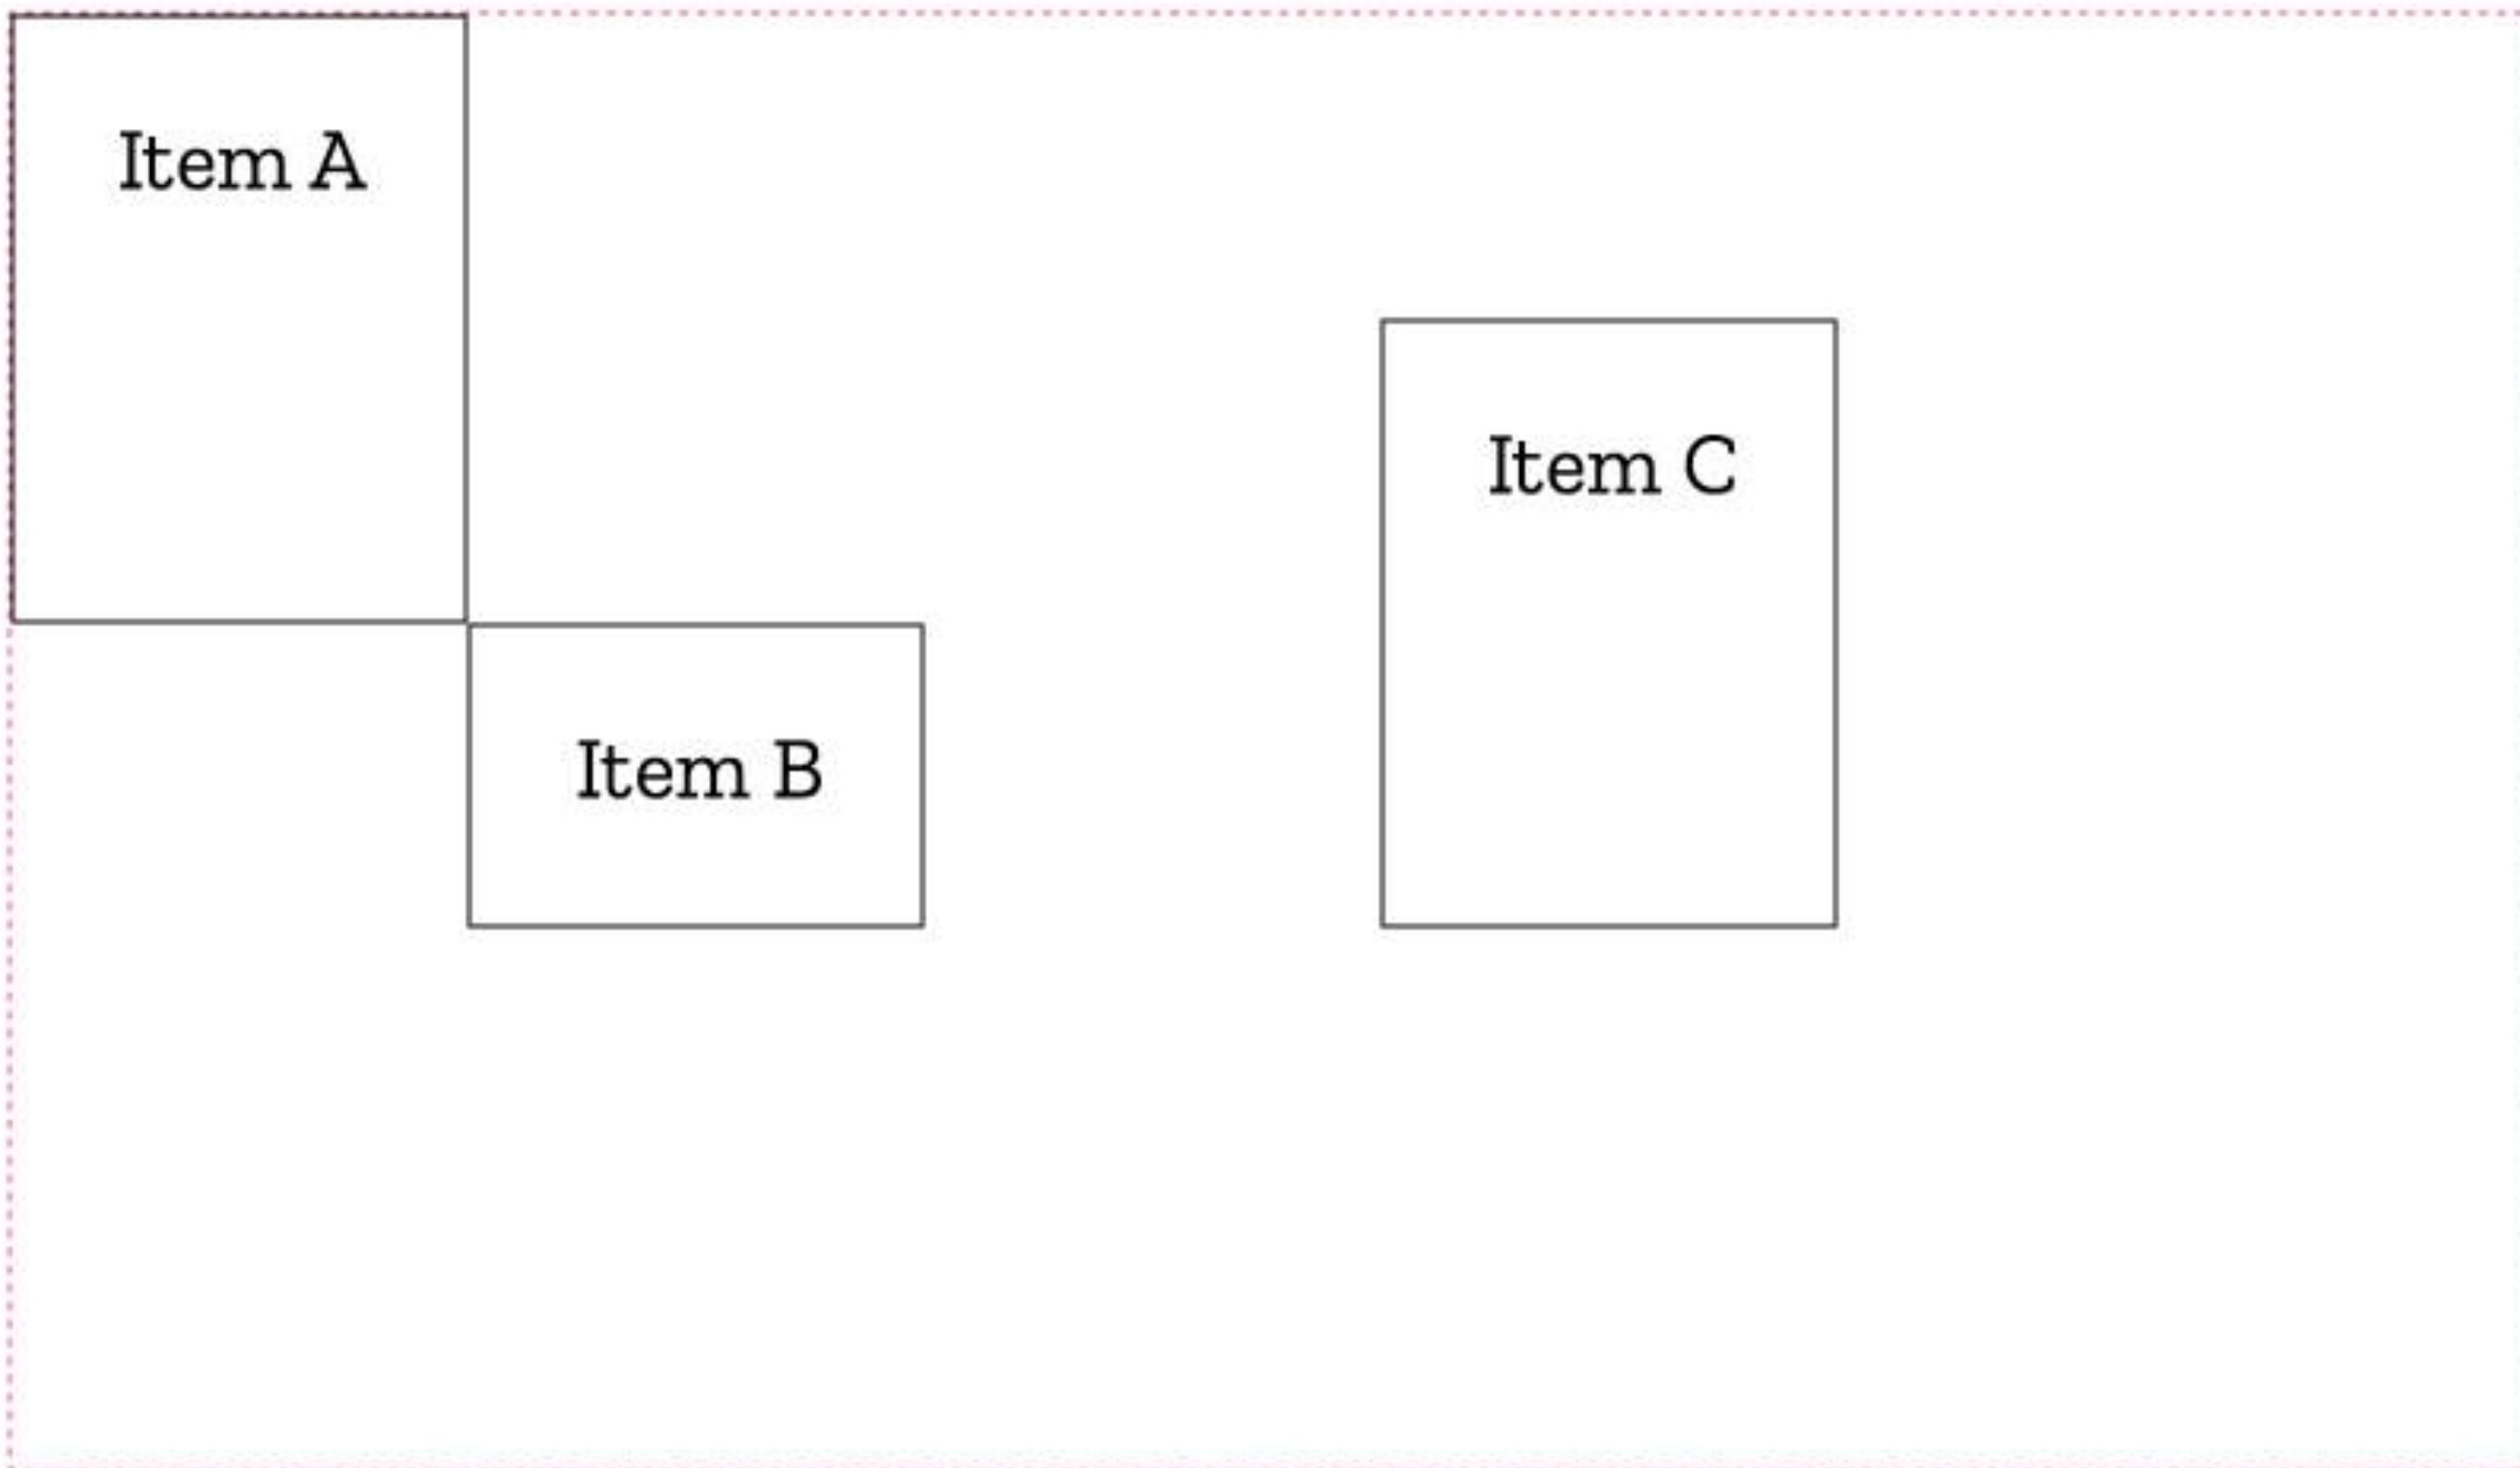

Grid placement with named areas

```
.grid-container {  
    display: grid;  
    grid-template-areas: "logo stats"  
                        "score stats"  
                        "board board"  
                        "... controls";  
}  
  
.logo { grid-area: logo; }  
.score { grid-area: score; }  
.stats { grid-area: stats; }  
.board { grid-area: board; }  
.controls { grid-area: controls; }
```

Using grid areas

```
.grid3 {  
  display: grid;  
  grid-template-columns: 150px  
  150px 150px 150px;  
  grid-template-rows: 100px 100px  
  100px;  
  grid-template-areas: 'a . . .'  
                      'a . . c'  
                      '. b . c';  
}  
  
.grid3 .a { grid-area: a; }  
.grid3 .b { grid-area: b; }  
.grid3 .c { grid-area: c; }
```

GENERATION

Overlap

<http://www.h55studio.com>

Tuesday 10th May
Hanson Ho

With his bold, stripped-back typographic approach, Hanson Ho founded H55 in 1999. It is now one of the most recognised and celebrated graphic design studios in Singapore.

HANSON HO IS VERY BUSY AS WELL AS RUNNING H55. HE IS AN ACTIVE MEMBER OF THE DESIGN SOCIETY AND HANDLES DESIGN AND PRODUCTION OF THEIR BIENNIAL JOURNAL. HOWEVER, WE MANAGE TO ARRANGE AN EARLY MEETING OVER BREAKFAST AT SHIBLY PRATA SHOP NEAR THE STUDIO. WE OPEN BY SAYING THAT SINGAPORE IS FREQUENTLY MENTIONED AS THE GRAPHICS HUB OF SOUTHEAST ASIA...

HANSON I think Hong Kong is very vibrant compared to Singapore. They've had a very strong identity throughout the years, even in the eighties. I think it has to do with language and less diversity, whereas here, identity is always a problem. Look at Japan and, yeah,

much influenced by Europe. Local culture and traditions. So I'm quite surprised you say that Hong Kong has a wider creative industry — they have a music industry, places like Taiwan have big stars, movie stars, film makers. Here there is nothing like that, the population is too small.

How you community change in the time you've been designing here?

Things have changed here a lot in the last ten years. The last generation was kind of traditional, quite hierarchical — studios, consultants, strategists, that kind of thinking from the nineties. Not very progressive. My peers didn't want to be like our predecessors, so we say "Why can't we be like the studios in London?" We actually referenced London a lot, that's the truth. We admiring people like Tomato and the Designers Republic, we read Creative Review and wanted to get into D&AD. Things like that. It was kind of a reference, if you were there at the right time no witness all of this. And as we started up our own small studios with a more independent voice — the studios had their own individualism representation, rather than consultants, strategists blah blah blah... So, I think things have changed a lot. It's easier now to set up a new business with new technology, we don't need a studio manager.

So, currently you run studio, you also chair The Design Society here in Singapore. How did things start out?

The Design Society is fairly new. It was set up a few years ago when the designers from my generation were stable and not struggling as much as when we started. We felt we should try to do something together.

What are the objectives of The Design Society?

We are interested in archiving Singapore design history, to map it, and also to offer a yearly conference. We have maybe four or five annual forums a year.

THINK GLOBAL GROW LOCAL

FIGTREE NETWORK

<http://www.figtrienetwork.com>

Wednesday 27th April
David Brabbins

Already an established consultancy in London and Paris, Figtree Network branched out to Hong Kong in 2010. David Brabbins tells us why.

Marketing Taiwan Office
Society for the Bureau of
Foreign Trade, Taiwan

TAIWAN.

Perfecting precision
together.
www.taiwan.gov.tw

WE FIND THE OFFICES OF FIGTREE NETWORK TUCKED AWAY IN A QUIET BUT COOL STREET IN THE WANCHAII DISTRICT OF THE CITY. AFTER VISITING THE MONOCLE STORE ACROSS THE ROAD, WE POP IN TO CHAT WITH DAVID AND OUR CONVERSATION QUICKLY LEADS TO THE RISE OF THE CREATIVE SECTOR IN HIS NEW HOMELAND.

DAVID I think there is a push going on, though not as strongly as in Singapore, which is a shame. In Hong Kong the government have identified the creative industry as one of six areas of growth as they try to expand beyond finance, property and shipping.

We've learned that in Hong Kong technical and production standards are high, but actual design perhaps less so.

Sure, this is the big leap that Asian businesses, especially Chinese businesses need to make. We've had the experience of going through that process with HTC. Many businesses are not yet ready to make the leap; so our first strategy when we came here was to help Asian businesses build global brands. But it's not as simple as just doing communications. They have to invest quite heavily in a long term strategy, acquire new competencies they never had; innovation, marketing. It is a big jump for companies that are used to making things for other people, and not designing things for themselves. HTC was a bit further along because they designed stuff for mobile networks so they had all the competencies.

How did Figtree Network get started?

We are about seven years old. Orange was the foundation client. I joined shortly after it was incorporated. You need eight good clients for an agency. HTC is our most recent large one and we have a couple more big ones in the UK right now.

OK, so how many offices does Figtree have?

Three. We've got London – which is our HQ – there are about forty people there. About three or four work in Paris, then eight of us here in Hong Kong.

Did you initially work in the London office?

Yeah. Back in the days when we were three guys in a garage, just like Google!

What brought you to Hong Kong?

Opportunity and change of scene. I was getting a bit bored with London; the weather isn't the best, high cost, low growth... I found that I kept stepping over at Hong Kong when I was on my way to Taiwan to meet with HTC. I used to come here before flying back to London to catch up with some mates. I gradually fell in love with the place, so I thought "Well, what we do could work here," so here we are.

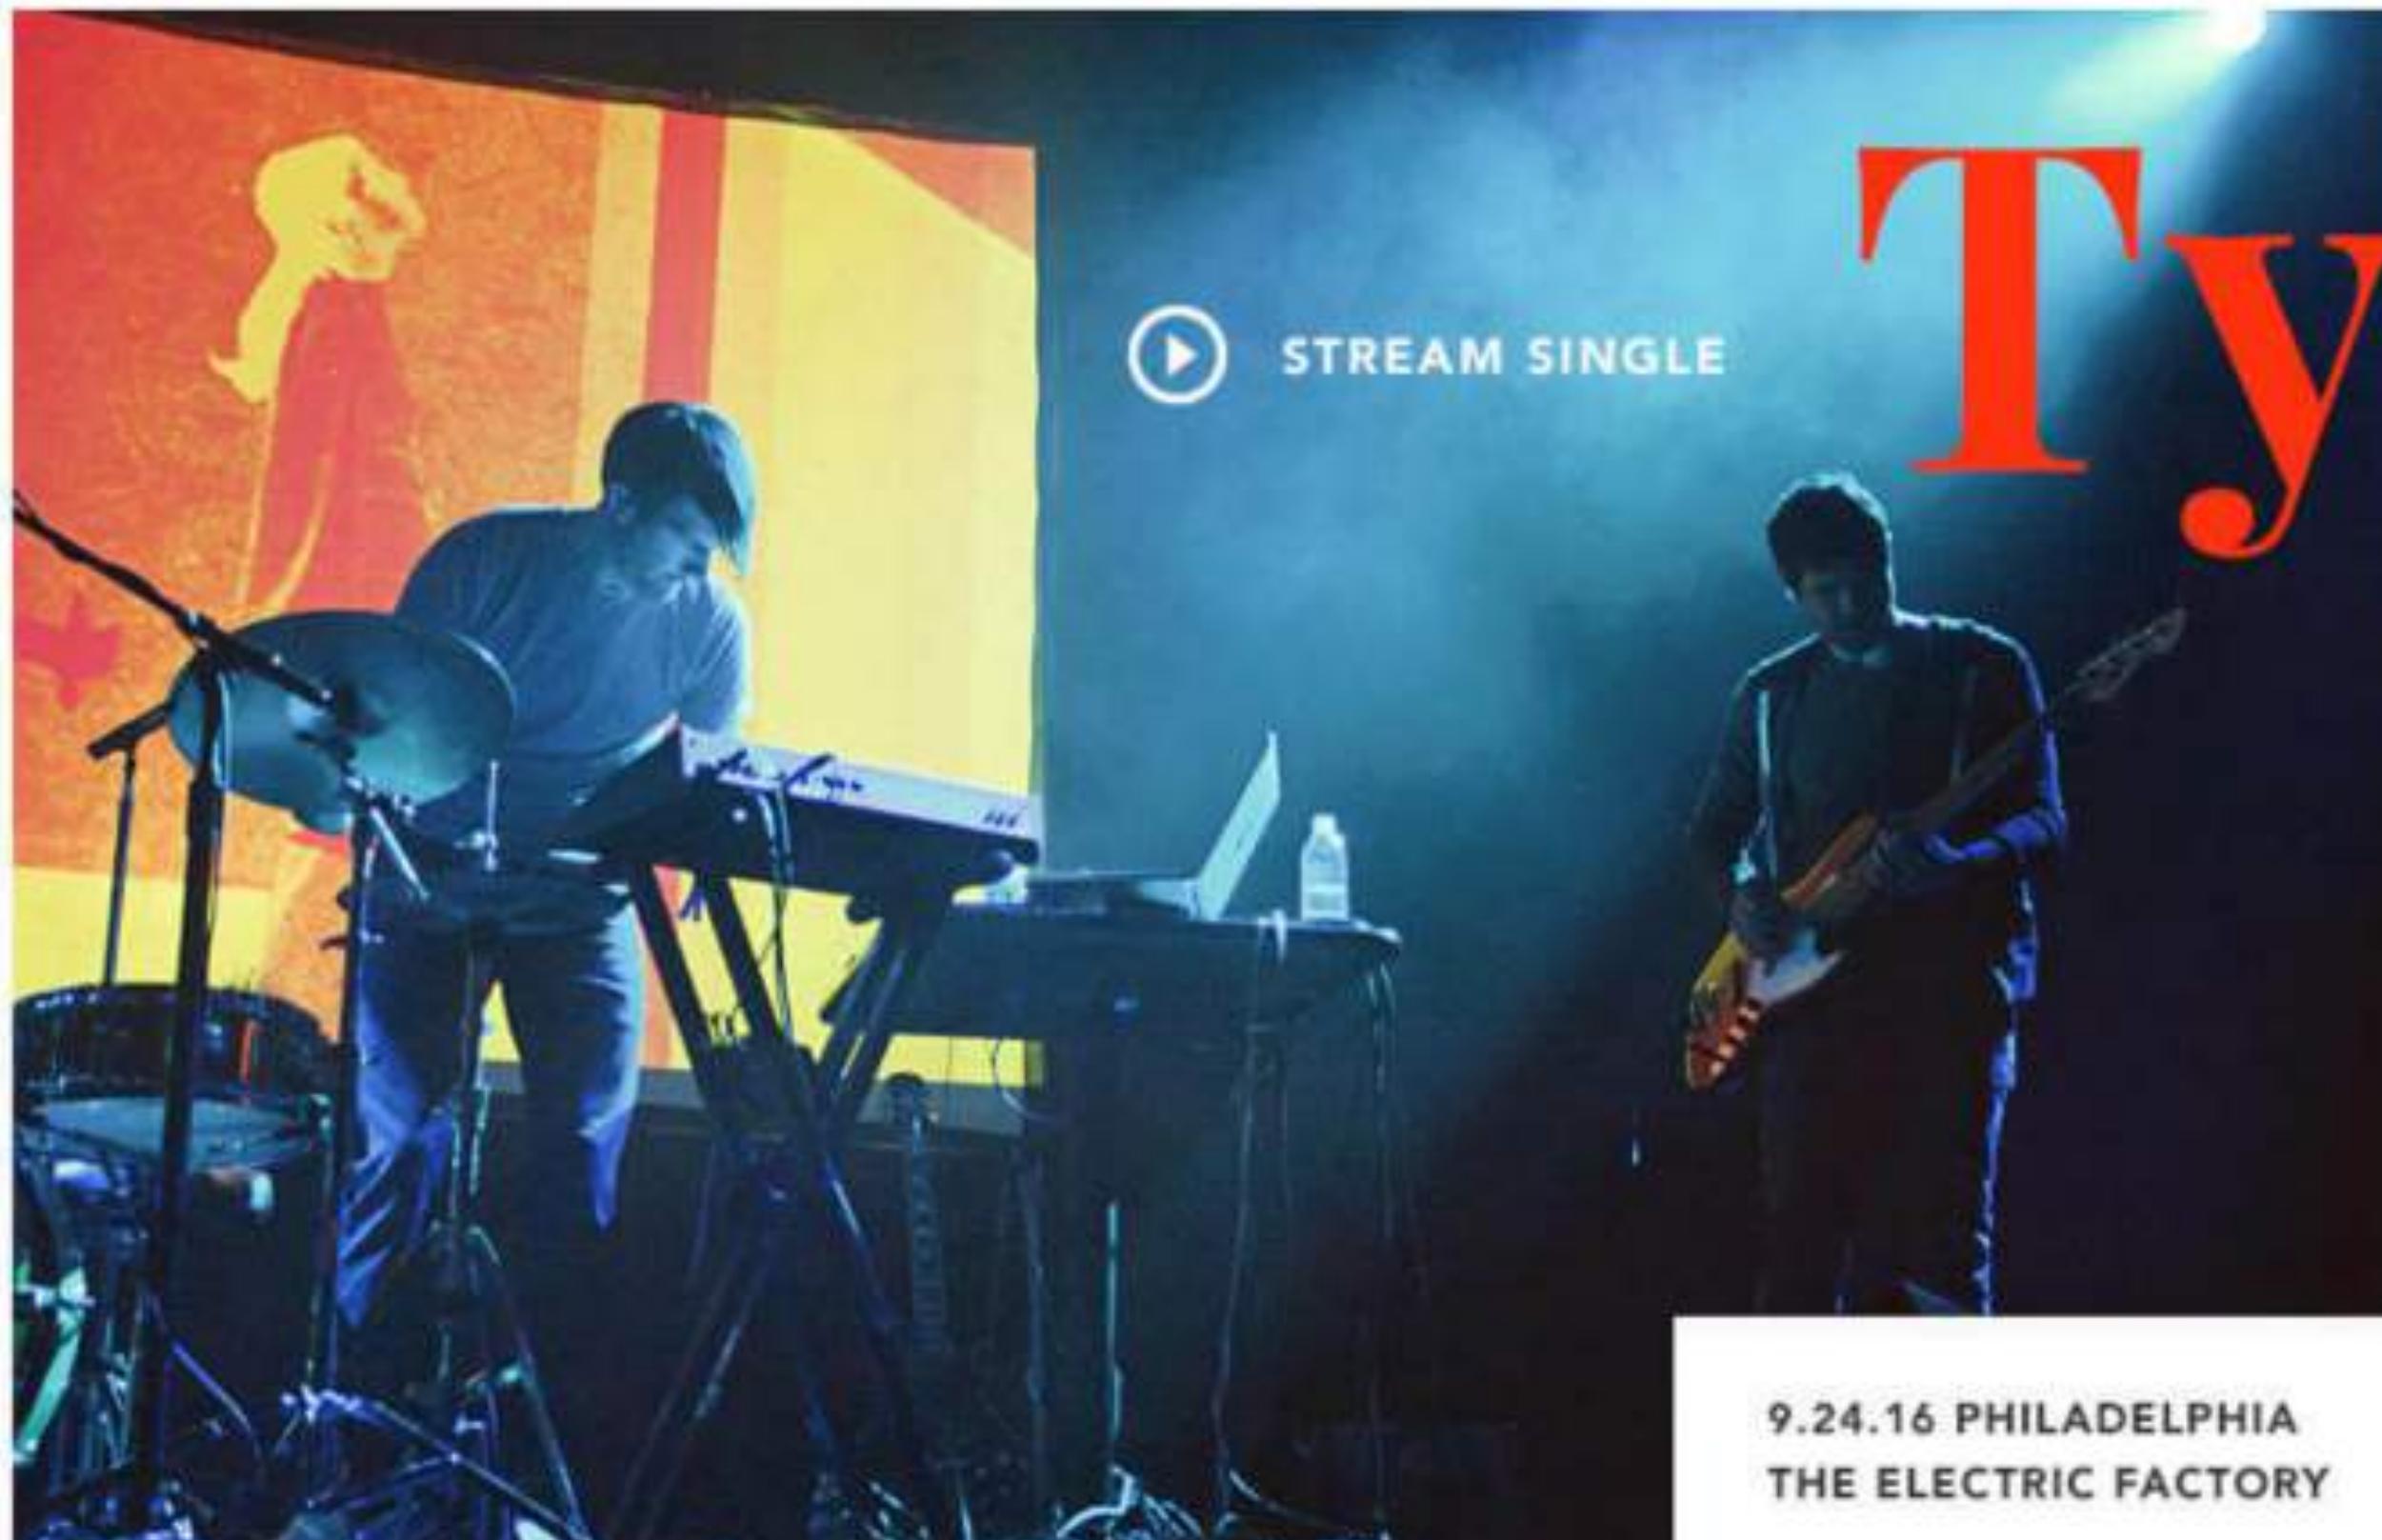

```

Building a grid layout

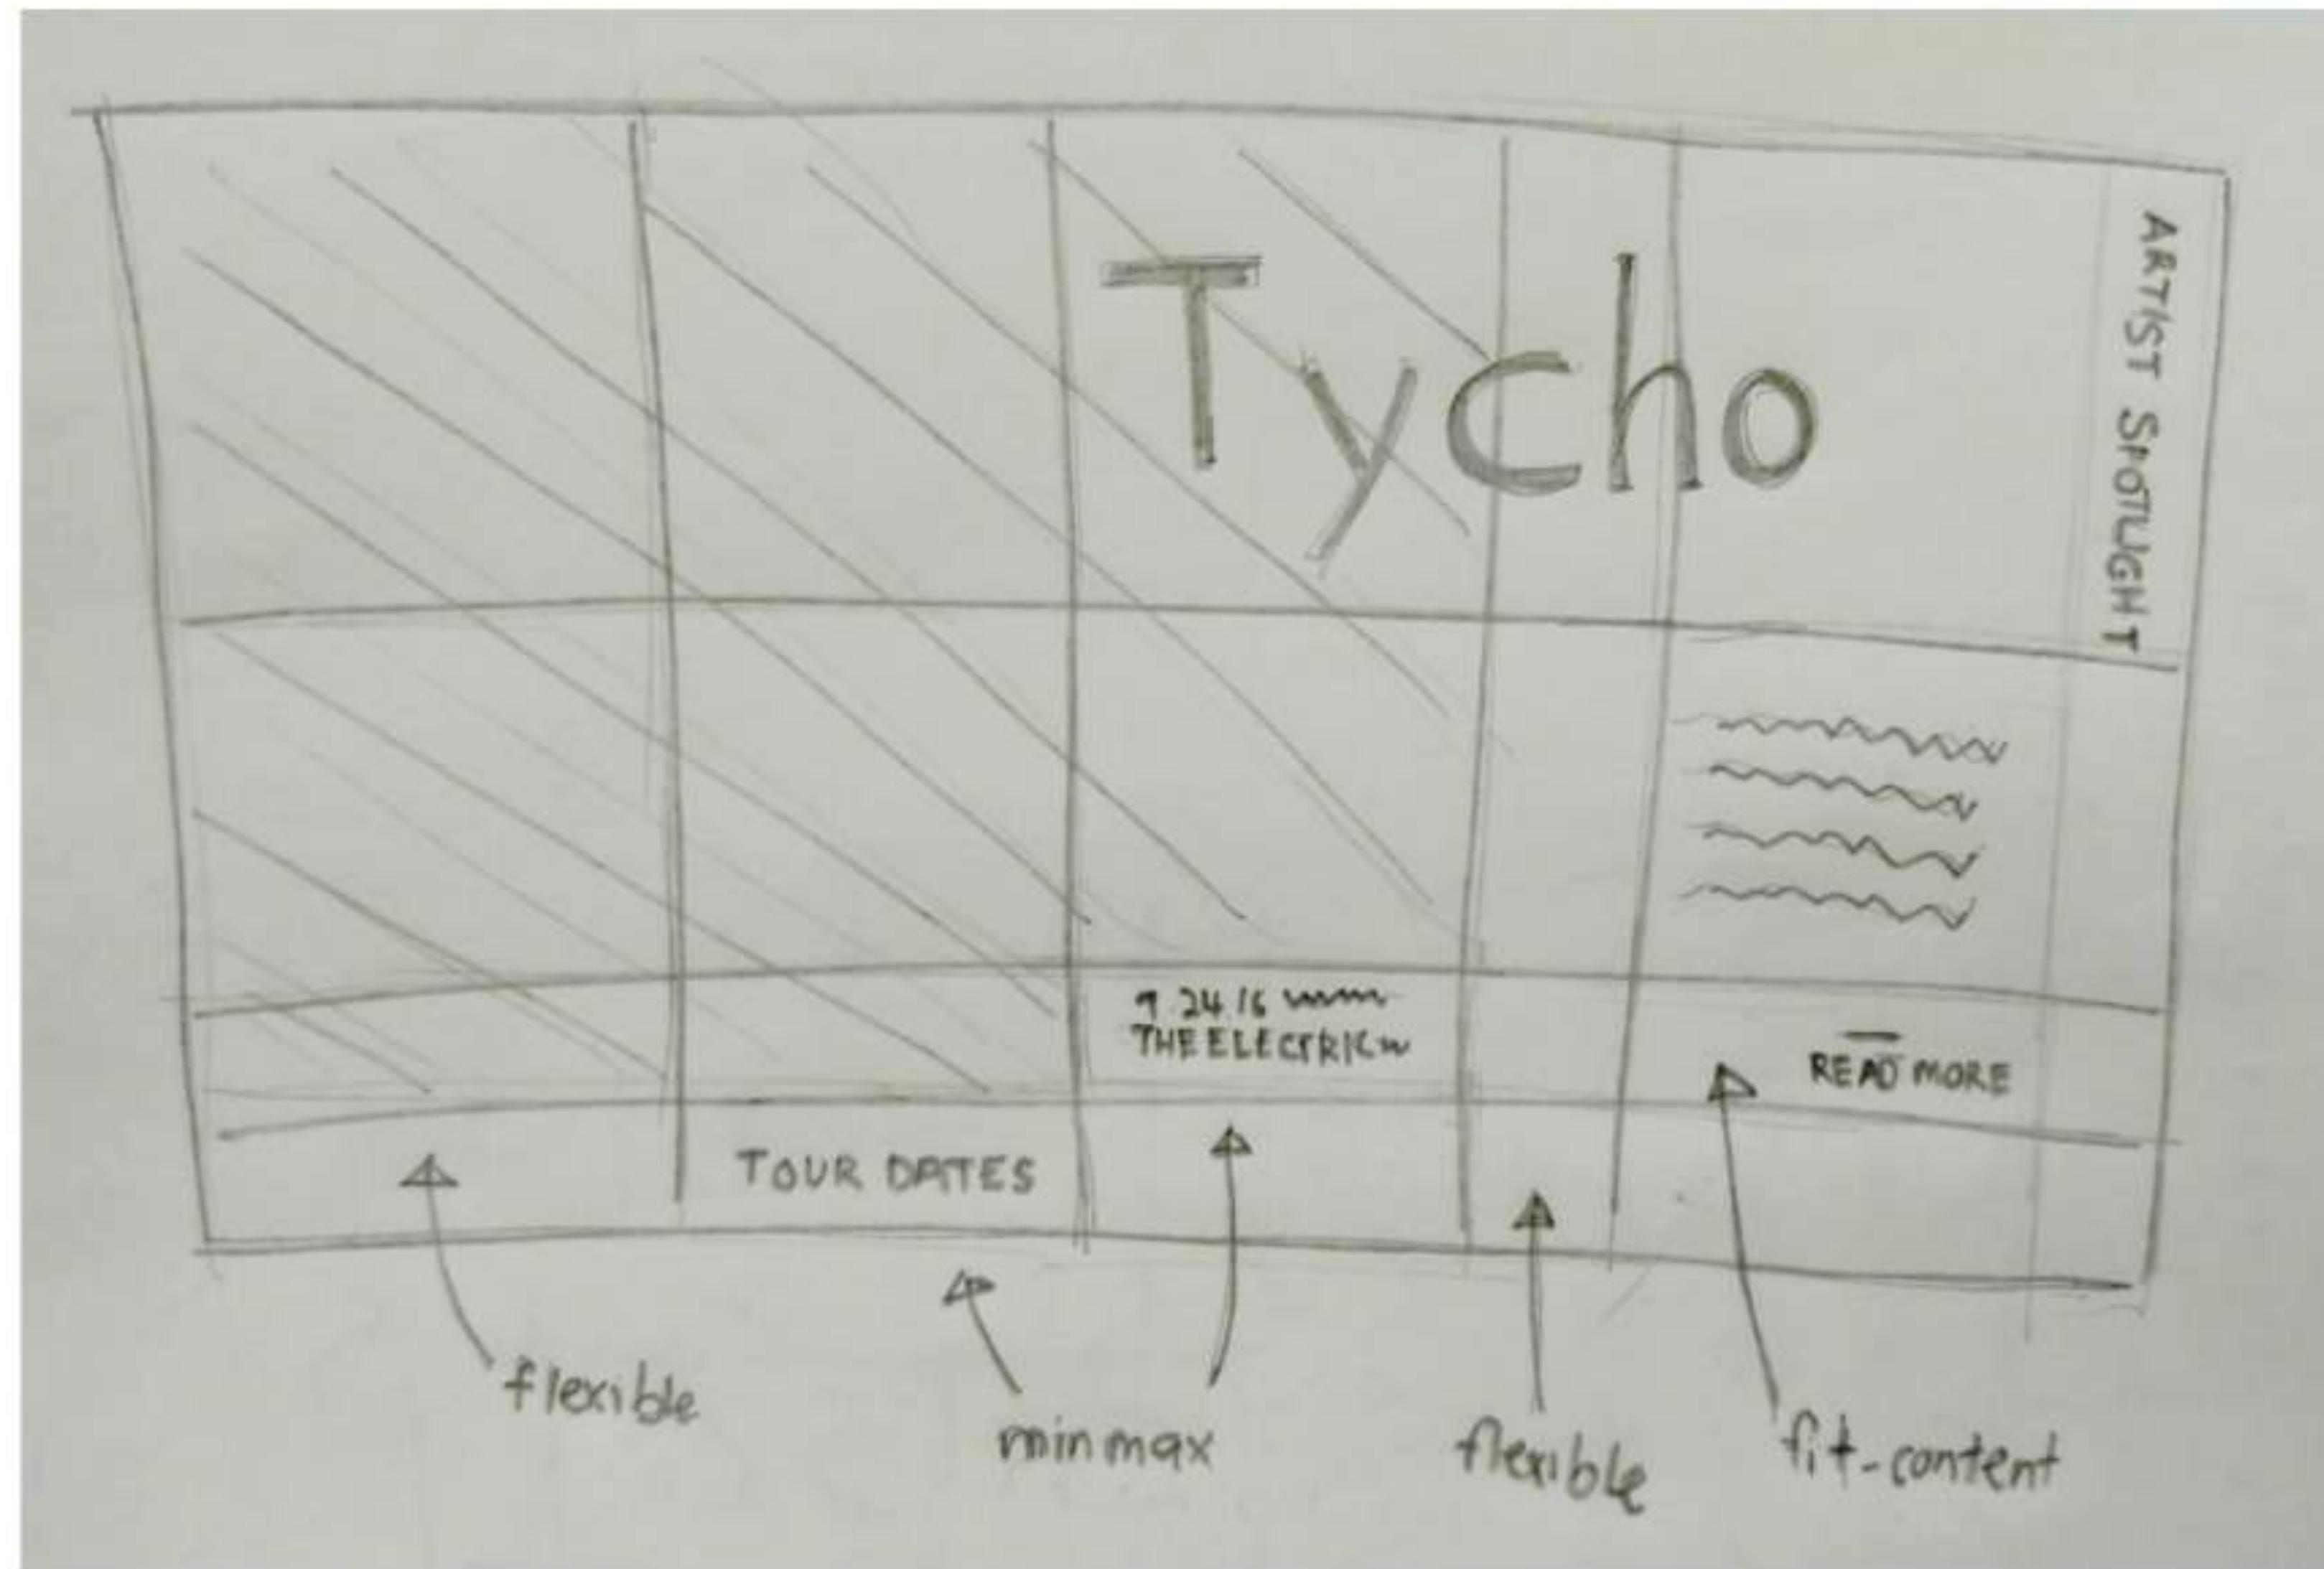

ARTIST SPOTLIGHT

Earlier this year, San Francisco-bred artist and designer Tycho announced a new album on the way for 2016, but gave scant details about the project, leaving fans to speculate about just what the ambient master had in store. Fans need no longer worry, as Tycho's fifth studio album, *Epoch*, has arrived in grand fashion.

Fallback with feature queries

A conditional group rule whose condition tests whether the user agent supports CSS property:value pairs.

Anatomy of a feature query

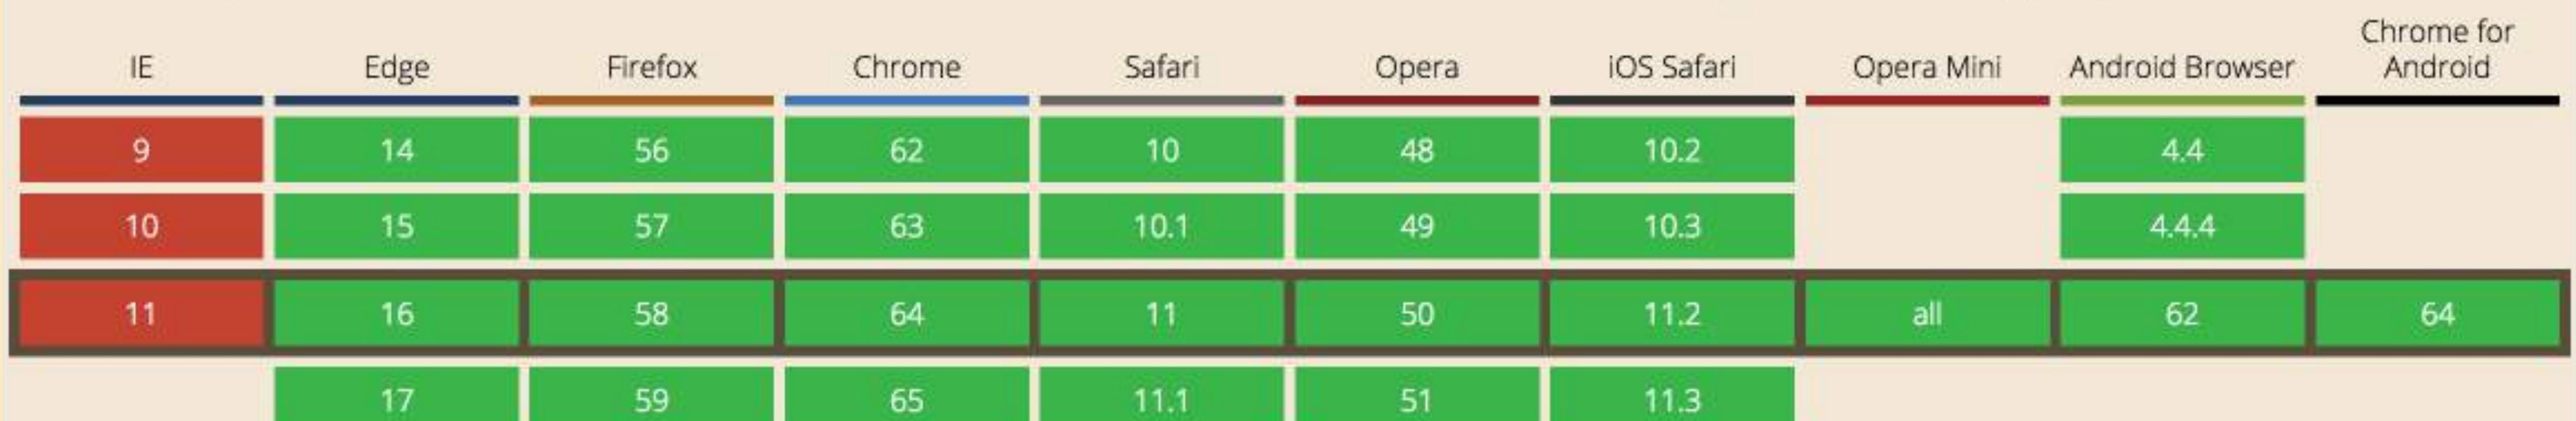

```
.selector {  
    /* Styles that are supported in old browsers */  
}  
  
@supports (property:value) {  
    .selector {  
        /* Styles for browsers that support the specified property */  
    }  
}
```

Browser support for @supports

CSS Feature Queries

CSS Feature Queries allow authors to condition rules based on whether particular property declarations are supported in CSS using the @supports at rule.

  Partial Support

Global: 93.52% + 0% = 93.52%

"CSS isn't a programming language. It's a stylesheet language. We shouldn't expect it to behave like a programming language. It has its own **unique landscape and structures**, ones that people with programming language mental maps might not expect."

—Danielle Huntrrods
